**Early Life Conditions and Rapid Demographic Changes in the Developing World** Mary McNiry, 2013-11-04 This book examines the long term consequences of improvements in life expectancy in the mid 20th century which are partly responsible for the growth of the elderly population in the developing world Rapid demographic changes in child and infant mortality due to the reduction in and better treatment of disease were not often accompanied by parallel increases in standard of living Lower mortality led to greater survival by those who had suffered poor early life conditions As a consequence the early life of these survivors may explain older adult health and in particular the projected increase in adult health disease and diabetes Recent dietary changes may only compound such early life effects This study presents findings from historical and survey data on nearly 147 000 older adults in 20 low middle and high income countries which suggest that the survivors of poor early life conditions born during the 1930s 1960s are susceptible to disease later in life specifically diabetes and heart disease As the evidence that the aging process is shaped throughout the entire life course increases this book adds to the knowledge regarding early life events and older adult health

*The Great Health Dilemma* Christopher Dye, 2021-05-27 The proverbial benefits of prevention over cure are self evident and yet we are reluctant to invest in staying healthy Resolution of this age old dilemma begins with a timeless truth the benefits of good health come at a cost prevention is not better than cure at any price That logic leads to the testable hypothesis that prevention should be favoured when an imminent high risk high impact hazard can be averted at relatively low cost Application of this idea helps to explain why cigarette smoking is still common place why the world was not ready for the COVID 19 pandemic why billions still do not have access to safe sanitation and why the response to climate change has been so slow Much more money and effort are invested in health promotion and prevention today than is commonly thought but the enormous avoidable burden of illness is reason to seek ways of investing further

*The Great Health Dilemma Is Prevention Better than Cure* provides a framework for investigating prevention and illustrates the application of principles with practical examples Chapter 1 discusses the history of prevention and draws on examples over a 5000 year period from neolithic times to the present day Chapter 2 considers the principles of prevention and the societal conditions that affect how individuals governments and countries react to issues linked to public health Chapters 3 to 8 explore the efficiency of prevention in a variety of settings including financing health services pandemic preparedness tuberculosis and hiv aids control non communicable diseases sanitation and climate change Drawing together the evidence chapter 9 provides suggestions for promoting good health and preventing disease in the future

*The Political Economy of Health and Welfare* W.Milo Keynes, 1988-06-18

**Gender and the Life Course** Alice Rossi, 2018-01-16 Gender and the Life Course is an interdisciplinary collection of essays on the lives of women and men as they are affected by history culture demography economic and political stratification and the biopsychological processes that attend maturation and aging The book covers three major topics Part I which examines gender and the life course in broad historical perspective includes a summary of recent work in biological ecology and primatology and an analysis of the persistence of cultural and gender differences in role organization in societies undergoing the transition from agrarianism to industrialism Other essays trace the changes in sources of household income of industrial workers over the life span and review temporal and gender differences in life span transitions Part II examines gender differentiation in a variety of contexts psychological psychobiological and sociological Alice Rossi's ASA Presidential Address reviews recent work on fathering and mothering and argues that sociological explanations of such gender differences need supplementation by concepts from evolutionary theory and the neurosciences Three essays deal with gender and economy one shows how gender stratification took hold in the early stages of industrialization in France another demonstrates the persistence of gender stratification in modern economies the third focuses on ideology in relation to gender and political power Part III examines various aspects of the aged in contemporary

society including an argument for an interpretive social science that uses diverse methods to improve our ability to describe and interpret many facets of the lives of elderly men and women a review of the methodology used to study changes in the aged population over time and an overview of existing data sets that permit further cohort and longitudinal analyses of the aged The final essays review social policies as they affect the elderly with particular attention to the fact that most very old people are women and the impact of the greatly expanded life course for family and kin relations Gender and the Life Course is a state of the art assessment of the best work currently being done on gender and age a s maturational factors and is essential reading for anyone interested in adult development and gender roles A Generation of Change Jacob S.

Siegel,1993-02-18 A Generation of Change is an exceptional study of the nation s elderly a population that has undergone profound changes in the years since World War II As modern medicine extends the average life span and the baby boom generation begins to approach middle age the number of older Americans is expected to more than double in the next century Currently 75 percent of U S health care expenditures go toward the elderly But as national trends toward early retirement and low birthrate continue an aging American population could face crises in meeting their financial and physical needs According to Jacob S Siegel in A Generation of Change astute public planning must be informed by an understanding of the demographic social and economic characteristics of the older population as it is today and as it will be in the coming years Siegel employs census and survey data from 1950 through the mid 1980s to describe a population constantly shifting in its ethnic and gender composition geographic distribution marital and living arrangements health employment and economic status Surprisingly there is tremendous disparity in the quality of life among the elderly Although their average poverty rate is below that of the general population there are dramatic levels of poverty among older women who are far more likely than men to live alone or in institutions As the elderly progress from the young old to the aged old those over 85 sharp differences emerge as income and employment decrease and degrees of chronic illness increase In addition residential location influences the quality of health care and public assistance available to the elderly an effect that may account for the marked migration of older people to Florida and Arizona Siegel analyzes the full range of characteristics for this heterogenous population and through comparisons with other age groups as well as with the elderly of the previous decades portrays the crucial influence of social and economic conditions over the life course on the quality of later life With our elderly population growing more numerous and long lived accurate information about them is increasingly essential A Generation of Change will serve as a valuable resource for policymakers seeking more effective solutions in critical areas such as housing long term health care and the funding of Social Security and retirement programs A Volume in the Russell Sage Foundation Census Series **The Population of the United States** Donald J. Bogue,Douglas L. Anderton,Richard E. Barrett,2010-07-06 This third edition written with two new coauthors combines 1990 census data with information from the Current Population Survey the National Health Interview Survey and numerous other sources even including demographic data not available in
