Applications of Analytical Techniques to the Characterization of Materials D.L. Perry, 1992-03-31 Over the last several years the field of materials science has witnessed an explosion of new advanced materials They encompass many uses and include superconductors alloys glasses and catalysts Not only are there quite a number of new enhies into these generic classes of materials but the materials themselves represent a wide array of physical forms as well Bulk materials for example are being synthesized and applica tions found for them while still other materials are being synthesized as thin films for yet still more new and in some cases as yet unknown applications The field continues to expand with thankfully no end in sight as to the number of new possibilities As work progresses in this area there is an ever increasing demand for knowing not only what material is formed as an end product but also details of the route by which it is made The knowledge of reaction mechanisms in their synthesis many times allows a researcher to tailor a preparative scheme to either

arrive at the final product in a purer state or with a better yield Also a good fundamental experimental knowledge of impurities present in the final material helps the investigator get more insight into making it

Trautwein, 2010-12-25 concentrates on teaching techniques using as much theory as needed application of the techniques to many problems of materials characterization Mossbauer spectroscopy is a profound analytical method which has nevertheless continued to develop The authors now present a state of the art book which consists of two parts The first

part details the fundamentals of Mossbauer spectroscopy and is based on a book published in 1978 in the Springer series Inorganic Chemistry Concepts by P Glich R Link and A X Trautwein The second part covers useful practical aspects of measurements and the application of the techniques to many problems of materials characterization The update includes the use of synchrotron radiation and many instructive and illustrative examples in fields such as solid state chemistry biology and physics materials and the geosciences as well as industrial applications Special chapters on magnetic relaxation phenomena S Morup and computation of hyperfine interaction parameters F Neese are also included The book concentrates on teaching the technique using theory as much as needed and as little as possible The reader will learn the fundamentals of the technique and how to apply it to many problems of materials characterization Transition metal chemistry studied on the basis of the most widely used Mossbauer isotopes will be in the foreground

When presented with a new compound or material the inorganic chemist will usually have several questions in mind about its composition and structure Although a simple elemental analysis may answer many questions about its composition the chemist will still have questions about its structure and if the material contains a metal atom he will often want to know its oxidation state coordination number and geometry Further at an increasingly frequent rate the chemist may need details of the spin state magnetic and perhaps dynamic properties of the material If the investigator is fortunate the material or compound may contain an element such as iron tin antimony iodine gold or one of several of the rare earth metals which are amenable to study by the Mossbauer effect Often the Mossbauer effect can sometimes with quite simple experiments provide the answers to all of these questions The goal of this book is to illustrate the effectiveness of the Mossbauer effect in providing the answers to the many questions that arise in characterizing new materials and indeed in studying known materials in more detail Several chapters introduce the effect to the novice and provide details about the various hyperfine interactions that are the bread and butter of the Mossbauer spectroscopist Three chapters deal specifically with the experimental aspects of the technique and the increasing importance of sophisticated computer analysis of the resulting data
