Creation Of Quantum Chromodynamics And The Effective Energy, The: In Honour Of A Zichichi On The Occasion Of The Galvani Bicentenary Celebrations L N Lipatov, Gabriele Veneziano, Gerard 't Hooft, Vladimir N Gribov, Victor F Weisskopf, 2001-01-03 UNDER THE SPELL OF THE GAUGE PRINCIPLE by G 't Hooft The University of Bologna and its Academy of Sciences in collaboration with the Italian National Institute for Nuclear Physics and the Italian Physical Society celebrated in 1998 the

bicentenary of a great pioneer in the field of electric phenomena Luigi Galvani the father of macroelectricity During these two centuries the physics of electric phenomena has given rise first to the Maxwell equations then to quantum electrodynamics and finally to the synthesis of all reproducible phenomena the Standard Model A cornerstone of the Standard Model is quantum chromodynamics QCD which describes the interaction between quarks and gluons in the innermost part of the structure of matter The discovery of QCD will be recalled in the future as one of the greatest achievements of mankind Many physicists the world over have contributed to its creation on both the experimental and the theoretical front Professor Antonino Zichichi has played an important role in this scientific venture as documented by his works which are reproduced in this invaluable volume One of the founders of European physics Professor Victor F Weisskopf contributes with his memories of the time when QCD had many problems This volume owes its existence to a founding father of QCD Professor Vladimir N Gribov whose sudden demise prevented him from directly contributing to its final edition Two world leaders in subnuclear theoretical physics Professors Gerardus t Hooft and Gabriele Veneziano illustrate the significance of the contributions of Antonino Zichichi in QCD *Techniques and Concepts of High-Energy Physics* Harrison B. Wormser, 1992 Hot Hadronic Matter Jean Letessier, Hans H. Gutbrod, Johann Rafelski, 2012-12-06 The past decade has seen the development of the operational understanding of fundamental interactions within the standard model This has detoured our attention from the great enigmas posed by the dynamics and collective behavior of strongly interacting particles Discovered more than 30 years ago the thermal nature of the hadronic particle spectra has stimulated considerable theoretical effort which so far has failed to confirm on the basis of microscopic interactions the origins of this phenomenon However a highly successful Statistical Bootstrap Model was developed by Rolf Hagedorn at CERN about 30 years ago which has led us to consider the boiling hadronic matter as a transient state in the transformation of hadronic particles into their

melted form which we call Quark Gluon Plasma QGP Today we return to seek detailed understanding of the thermalization processes of hadronic matter equipped on the theoretical side with the knowledge of the fundamental strong interaction theory the quantum chromodynamics QCD and recognizing the important role of the complex QCD vacuum structure On the other side we have developed new experimental tools in the form of nuclear relativistic beams which allow to create rather extended regions in space time of Hot Hadronic Matter The confluence of these new and recent developments in theory and experiment led us to gather together from June 27 to July 1 1994 at the Grand Hotel in Divonne les Bains France to discuss and expose the open questions and issues in our field

Quark-Gluon Plasma 2 Rudolph C. Hwa, 1995 This is a sequel to the review volume *Quark Gluon Plasma* There are 13 articles contributed by leading investigators in the field covering a wide range of topics about the theoretical approach to the subject These contributions are timely reviews of nearly all the actively pursued problems written in a pedagogical style suitable for beginners as well as experienced researchers
