Local, Traditional and Indigenous Food Systems in the 21st Century to Combat Obesity, Undernutrition and Climate Change, 2nd edition Rebecca Kanter, Sofia Boza, Gina Kennedy, 2023-07-31 Traditional and indigenous food systems have existed for centuries and were in balance with local food supplies globally. However, between the mid 20th and early 21st century, the green revolution dramatically altered food production, which in turn affected the inclusivity of traditional production systems within food systems and subsequently traditional dietary intakes. This change was accompanied by lifestyle changes and spurred a global nutrition transition. Today, the world faces a global syndemic of obesity, undernutrition, and climate change. A new call to action to create food systems that nourish people and sustain the planet is needed. Traditional and indigenous food systems have long been recognized as systems that can both support good human nutrition as well as maintain a balance with nature. There is an underutilized knowledge base around traditional and indigenous food systems. This includes the knowledge of nutritious species, traditional culinary preparations, and cultural practices. Greater agricultural production of underutilized species can result in more sustainable agricultural and food systems, which can also help improve livelihoods and food security. Traditional and indigenous cultural practices with respect to both land and water management as well as culinary practices contribute to both sustainable food production and consumption. These practices require a greater evidence base in order to be incorporated into public health nutrition initiatives related to improving dietary quality, such as food-based dietary guidelines, for example. An increased focus on the importance of local traditional and indigenous food systems and nutrition could therefore help countries to improve human nutrition and ideally help mitigate the global syndemic of obesity, undernutrition, and climate change. This Research Topic will focus on documenting diverse local food systems and promoting elements within them that can help improve nutrition and health, both human and planetary, in various ways, including the livelihood development of knowledge holders.

Glossary of Chinese Medicine - E-Book Li Tian, Anton Lachner, 2016-07-02 Anyone who learns the skills of acupuncture or who extends his knowledge of TCM is inevitably confronted with terms which hitherto had always meant something different to him or her Take the use of the word wind for example to refer to a pathogenic factor contributing to illnesses rather than its sense as a climatic factor This difficulty is compounded by the fact that in most books these terms are not used in a clear and uniform way One of the many examples is the Chinese term xu which is translated as insufficiency but also as deficiency or severity and is often not even used consistently within one and the same publication This glossary presents all the Chinese terms in Chinese characters and in Pinyin script that are relevant to TCM and provides their English translations It also provides an explanation of how for example the location or the function of an acupuncture point can be concluded from its name Teaches the reader to correctly pronounce important terms from TCM which are increasingly used in pinyin transcription The significance of TCM concepts provide explanations for the function of points and medications Written by leading experts in the field Attractive design throughout

Language Typology Alice Caffarel, J.R. Martin, Christian M.I.M. Matthiessen, 2004-12-23 This book is intended as a systemic functional contribution to language typology both for those who would like to understand and describe particular languages against the background of generalizations about a wide range of languages and also for those who would like to develop typological accounts that are based on and embody descriptions of the systems of particular languages rather than isolated constructions The book is a unique contribution in at least two respects On the one hand it is the first book based on systemic functional theory that is specifically concerned with language typology On the other hand the book combines the particular with the general in the description of languages it presents comparable sketches of particular languages while at the same time identifying generalizations based on the languages described here as well as on other languages The volume explores eight languages covering seven language families French German Pitjantjatjara Tagalog Telugu Vietnamese Chinese and Japanese
