Quality Enhancements Using Microwaves:

The Development and Application of Microwave Heating Wenbin Cao, 2012-11-07 Microwave heating has found many applications ranging from the microwave ovens in kitchen to heat food to a sterilization apparatus for medical treatment to materials processing in the various fields In those applications microwave heating demonstrates significant advantages over conventional methods in reduced processing time and less environmental impacts This book is comprised of eight chapters within three parts highlighting different aspects covering both the basic understandings and the advanced applications The included discussion on the application of microwave heating in the field of food chemical engineering agricultural forestry and mineral processing industry will provide a passage for future research As a monograph it is designed to be a fundamental reference book aiming to help the readers to concentrate on the key aspects behind the success in microwave heating Power Quality Enhancement Using Custom Power Devices Arindam Ghosh, Gerard Ledwich, 2012-12-06 Power Quality Enhancement Using Custom Power Devices considers the structure control and performance of series compensating DVR the shunt DSTATCOM and the shunt with series UPQC for power quality improvement in electricity distribution Also addressed are other power electronic devices for improving power quality in Solid State Transfer Switches and Fault Current Limiters Applications for these technologies as they relate to compensating busses supplied by a weak line and for distributed generation connections in rural networks are included In depth treatment of inverters to achieve voltage support voltage balancing harmonic suppression and transient suppression in realistic network environments are also covered New material on the potential for shunt and series compensation which emphasizes the importance of control design has been introduced Microwaves: Theory and Application in Materials Processing, 1997 Vols for 1991 consist of proceedings of the Symposium on Microwaves Theory and Application in Materials Processing 1993 1995 Microwaves Theory and Application in Materials Processing 1997 World Congress on Microwave and Radio Frequency Processing Seed Quality Enhancement: Principles and Practices K. Vanangamudi, G. Sastry, S. Kalaivani, A. Selvakumari, M. Vanangamudi, P. Srimathi, 2010-03-01 Seed is the source of future plants or foods is the storage place of culture of history is the first link in the food chain is the ultimate symbol of food security Seed is the source of life Seeds are basic in crop production No agricultural practice can improve a crop beyond the limits set by the seed Quality seed is the key for successful agriculture which demands each and every seed should be readily germinable and produce a vigorous seedling ensuring high yield Care with the seed and joy with the harvest and Good seed doesn t cost it always pays are the popular adage which enlightens the importance of the quality seed The farmers always very much interested in the best seed management practices which are safe environmentally sound and scientifically proven technologies Understandably in view of the importance of quality seeds in Agriculture both as a product and as a means of establishing a crop most attention at all levels of investigation has been directed to crop seeds Since seed is a biological entity deterioration beyond harvest is inevitable. The consequences of low

quality seeds are poor germination low and delayed emergence and weak growth leading to poor field stand and ultimately reflecting on reduced yield Low productivity could be attributed broadly to use of poor quality seeds At present to overcome this several seed enhancement techniques are available for quality upgradation It has two goals one is related to seed designing and other to seed functioning The rationale for pre sowing seed enhancement techniques is to mobilize the seeds own resources and to augment them with external resources to get maximum improvement in field stand establishment and yield To achieve this several physical physiological and biochemical treatments are available at present to give value addition to seeds Physiological seed treatments that improve seed performance are based primarily on seed hydration and dehydration Among several non physiological seed treatments coating or pelleting can also indirectly improve seed germination stand establishment and crop productivity Processing Effects on Safety and Quality of Foods Enrique Ortega-Rivas, 2009-10-08 Covers a Host of Groundbreaking TechniquesThermal processing is known to effectively control microbial populations in food but the procedure also has a downside tcan break down the biochemical composition of foods resulting in a marked loss of sensory and nutritional quality Processing Effects on Safety and Quality of Foods delineates three dec Advances in Microwave and Radio Frequency Processing M.
