Quantitative Assessment In Epilepsy Care:

Quantitative Assessment in Epilepsy Care Harry Meinardi, Joyce A. Cramer, Gus A. Baker, Antonio Martins da Silva, 2012-12-06 Advances in epilepsy in recent decades have allowed for improved algorithms for diagnosis and a common understanding of terminology with the development of the International Classifications of Seizures and the Epilepsies. Nevertheless, no common system exists for the estimation of epilepsy severity or its impact on quality of life. Therefore, epileptologists lack the ability to make quantitative assessments of individual patients for comparison of care or for meta-analyses in clinical trials. This book on the Quantitative Assessment of Epilepsy Care approaches this omission by addressing the potential application of clinimetrics within the framework of epilepsy treatment. Clinimetrics is a fast-growing discipline concerned with the quantification of clinical symptoms with respect to decision making relating to diagnosis, treatment, and prognosis. These methods allow for the development and validation of clinical scoring systems. For example, the Glasgow Coma Scale is widely used. As a chronic disorder, epilepsy would benefit from clinimetric methodology to create uniformity and to allow for comparisons among evaluations. In addition, epileptologists have not yet developed assessments of health-related quality of life to define the overall condition of the chronic epilepsy patient and various therapeutic endpoints. While clinimetric tools are essential for research, they will also be useful in clinical practice for the care of individual patients by documenting status and changes over time. This treatise will provide critical analyses of whether existing rating scales and techniques are valid to use and which types of scales and techniques require further development. **Indexes to the Epilepsy Accessions of the Epilepsy Information System** J. Kiffin Penry, 1978 [A Multidisciplinary Approach to Myelin Diseases II](#) S. Salvati, 2012-12-06 The diseases that fall under the generalized group of demyelinating diseases: Multiple Sclerosis, Leukodystrophies, Encephalomyelitis are the focus of worldwide concern. This volume contains papers presented by leading scientists who attended the NATO Advanced Research Workshop held at the Istituto Superiore di Sanità, Rome, March 1-4, 1993. This book is an update of the previous one published in 1987 of the research discussed at a similar meeting held in 1986. It was decided to hold this 2nd meeting since there has been great progress in the advances in understanding the myelinogenesis process in the last five years. The workshop gathered together scientists from many fields such as cellular and molecular biology, immunology, pathology, virology, and of course clinical neurology. Stimulating ideas were exchanged in the hope that more knowledge of demyelinating diseases can lead to new therapeutic approaches. Although the workshop was on the whole similar to the previous one, this time there was more emphasis on experimental models and clinical aspects. In the former, the use of animal and cellular models as tools for understanding the pathological mechanisms linked to human disease were discussed; in the latter, the clinicians described the filtering down of basic research to clinical treatment. The publication of this interdisciplinary exchange is to make known the results of the most recent research among the investigators from all over the world involved in these studies. Vascular Endothelium John D. Catravas, Allan D. Callow, Una S. Ryan, 2012-12-06 This book is a compilation of the lectures and oral and poster communications presented at the Advanced Study Institute on Vascular Endothelium Physiological Basis of Clinical Problems II which took place between June 20 and 30 1992 in Rhodes

Greece This third in a series of ASIs on vascular endothelium continued on the theme of the first 1988 ASI on Receptors and Transduction Mechanisms and particularly expanded that of the 1990 conference on Physiological Basis of Clinical Problems We continued the successful practice of bringing together clinicians and scientists this was reflected equally well in the composition of the organizing committee as in the background of the participants Endothelial cell functions and dysfunctions present as many challenges to the investigator as they do to the curious clinical practitioner As these problems are necessarily different this unique ten day co habitation of these individuals continued to offer fresh outlooks to each stimulated potential collaborative efforts and most importantly advanced ever so slightly our knowledge of vascular biology This year's conference was further enriched by the presence of several of our colleagues from Eastern Europe whom we are delighted to welcome as officially sponsored participants to this and future NATO supported meetings It is never superfluous to remind readers and participants that those signing at the bottom of this page while responsible for many of the ASI's and the book's deficiencies are but three of the many contributors to the successes
