Quantitative Analysis Of Structure In Teaching:

Teaching Statistics and Quantitative Methods in the 21st Century Joseph Lee Rodgers, 2020-07-14 This work which provides a guide for revising and expanding statistical and quantitative methods pedagogy is useful for novice and seasoned instructors at both undergraduate and graduate levels inspiring them to use transformative approaches to train students as future researchers Is it time for a radical revision in our pedagogical orientation How are we currently teaching introductory statistics and quantitative methods and how should we teach them What innovations are used what is in development This ground breaking edited volume addresses these questions and more providing cutting edge guidance from highly accomplished teachers Many current textbooks and syllabi differ in only superficial ways from those used 50 years ago yet the field of quantitative methods and its relationship to the research enterprise has expanded in many important ways A philosophical axiom underlying this book is that introductory teaching should prepare students to potentially enter more advanced quantitative methods training and ultimately to become accomplished researchers The reader is introduced to classroom innovation and to both pragmatic and philosophical challenges to the status quo motivating a broad revolution in how introductory statistics and quantitative methods are taught Designed to update and renovate statistical pedagogy this material will stimulate students new instructors and experienced teachers **Teaching Quantitative Methods** Geoff Payne, Malcolm Williams, 2011-03-14 A clear innovative text from world experts this clearly lays out the problems strategies and resources associated with the teaching of quantitative methods in modern universities It is a pragmatic approach which will be of interest to any academic teaching numbers to their students New Approaches to the Investigation of Language Teaching and Literature Garcés-Manzanera, Aitor, Carrillo García, María Encarnacion, 2023-04-11 In the last two decades the field of language and literature teaching has experienced considerable growth as a result of the wide array of new methodological avenues that have arisen from different angles This paradigm shift has paved the way for the integration of newly conceived didactic resources such as the mediation of social networks for learning language or the interdisciplinarity of culturally mediated language education It is crucial to understand this shift in order to ensure students receive the best education possible New Approaches to the Investigation of Language Teaching and Literature presents an overview of the ongoing methodological tools practices research designs and strategies used in language and literature teaching and provides education researchers and practitioners with empirically sustained evidence of teaching strategies that may be implemented in language education Covering key topics such as language skills adult learners digital literacy and learning aids this reference work is ideal for researchers scholars academicians practitioners educators and students *Engineering Teaching in China's Higher Education* Tengting Zhuang, 2023-06-02 Based on a case study of engineering teaching in China's higher education sector this book unravels the interlocking influencing factors that condition the experience of engineering faculty members along with multiple stakeholders expectations of engineering teaching What motivates and demotivates a

university instructor to provide excellent teaching especially in the disciplines where effective instructor guidance is crucial for student learning This book gives evidence based answers to this research question drawing upon a social realist framework in relation to the disciplinary features of engineering and based on both qualitative and quantitative methods It expatiates upon structural cultural and reflexive factors concerning both the academic profession and industry and how teaching behaviors are shaped In doing so the author advances pragmatic suggestions for higher education reform under the prevalent performance management systems posing implications for global higher education in regard to what structural arrangements and cultural milieu should be in place to unleash the potential of engineering teaching The book will appeal to scholars of higher education Chinese and comparative education and education sociology and academics and policy makers interested in engineering education and teacher education

Assessing Teacher Effectiveness Jim Campbell, Leonidas Kyriakides, Daniel Muijs, Wendy Robinson, 2012-10-12 How can we really evaluate teacher effectiveness Systems of teacher appraisal and evaluation are being created across the world in order to monitor and assess teacher performance But do the models used really give a fair evaluation Based on international research the authors argue that teacher effectiveness is too narrowly conceptualised and methods of measuring it are not attuned to the real contexts in which teachers work They propose a model of differential teacher effectiveness which takes into account that teachers may be more effective with some categories of students than with others teachers may be more effective with some teaching contexts than others teachers may be more effective with some subjects or components than with others Building on and developing previous research on models of teacher effectiveness and current theories the authors open up possible new debates which will be of interest to academics and researchers working in this area throughout the world
