Smart Big Data in Digital Agriculture Applications Haoyu Niu, YangQuan Chen, 2024-02-28 In the dynamic realm of digital agriculture the integration of big data acquisition platforms has sparked both curiosity and enthusiasm among researchers and agricultural practitioners This book embarks on a journey to explore the intersection of artificial intelligence and agriculture focusing on small unmanned aerial vehicles UAVs unmanned ground vehicles UGVs edge AI sensors and the profound impact they have on digital agriculture particularly in the context of heterogeneous crops such as walnuts pomegranates cotton etc For example lightweight sensors mounted on UAVs including multispectral and thermal infrared cameras serve as invaluable tools for capturing high resolution images Their enhanced temporal and spatial resolutions coupled with cost effectiveness and near real time data acquisition position UAVs as an optimal platform for mapping and monitoring crop variability in vast expanses This combination of data acquisition platforms and advanced analytics generates substantial datasets necessitating a deep understanding of fractional order thinking which is imperative due to the inherent complexity and consequent variability within the agricultural process Much optimism is vested in the field of artificial intelligence such as machine learning ML and computer vision CV where the efficient utilization of big data to make it smart is of paramount importance in agricultural research Central to this learning process lies the intricate relationship between plant physiology and optimization methods The key to the learning process is the plant physiology and optimization method Crafting an efficient optimization method raises three pivotal questions 1 What represents the best

approach to optimization 2 How can we achieve a more optimal optimization 3 Is it possible to demand more optimal machine learning exemplified by deep learning while minimizing the need for extensive labeled data for digital agriculture This book details the foundations of the plant physiology informed machine learning PPIML and the principle of tail matching POTM framework It is the 9th title of the Agriculture Automation and Control book series published by Springer Applications of Systems Approaches at the Farm and Regional Levels P.S. Teng,M.J. Kropff,H.F.M. ten Berge,J.B. Dent,F.P. Lansigan,H.H. Van Laar,2012-12-06 Systems approaches for agricultural development are needed to determine rational strategies for the role of agriculture in national development Mathematical models and computer simulation provide objective tools for applying science to determine and evaluate options for resource management at field farm and regional scales However these tools would not be fully utilizable without incorporating social and economic dimensions into their application The second international symposium Systems Approaches for Agricultural Development held in Los Ba os 6 8 December 1995 fostered this link between the bio physical sciences and the social sciences in the choice of keynote papers and oral presentations a selection of which is included in this book The book s contents further reflect how systems approaches have definitely moved beyond the research mode into the application mode The large number and high quality of interdisciplinary research projects reported from different parts of the globe to determine land use options that will meet multiple goals and yet sustain natural resource bases is a key indicator of this coming of age At the farm level where trade off decisions between processes and products commodities feature strongly much progress is also evident in the development of systems based tools for decision making This book will be of particular interest to all agricultural scientists and planners as well as students interested in multidisciplinary and holistic approaches for agricultural development *Agricultural Finance Review* ,1989
