Progress in Optics, 2011-09-21 **Progress in Optics** Selected Papers on Laser Doppler Velocimetry Ronald J. Adrian, 1993 **OAR Quarterly Index of Current Research Results** United States. Air Force. Office of Aerospace Research, 1964 **Fibre Optics** W. B. Allan, 2012-12-06 The emergence of fibre optics as a commercially viable technology occurred barely ten years ago in this time it has become an established field with a variety of applications This book has been written in an attempt to review the entire field with an emphasis on the practical applications of the technology This approach has been adopted since it was felt that there was a need for a work which could be referred to by non specialists in the field who were interested in or who wished to make use of fibre optics With this readership in mind the theory has been presented in as simple a manner as possible and emphasis has been placed on the description of typical applications and the manufacturing techniques of the technology It is hoped that this mode of presentation will enable the reader to form an appreciation of both its advantages and its limitations **Molecular and Biological Physics of Living Systems** R.K. Mishra, 2012-12-06 The living organisms and systems possess extraordinary properties of programmed development differentiation growth response movement duplication of key molecules and in many cases higher mental functions But the organisms are physical objects so they must follow laws of physics yet they do not seem to obey them Physicists cannot easily persuade themselves to accept this as finally true Non living objects are governed by these laws of physics and they can explain these properties However in the living systems too phenomena encountered like coupled non linear interactions manybody effects cooperativity coherence phase transitions reversible metastable states are being understood better with the aid of powerful theoretical and experimental techniques and hope is raised that these may let us understand the mysteriousness of life Contributors to this volume are a small fraction of rapidly growing scientific opinion that these aspects of living bodies are to be expected in a hitherto inadequately suspected state of matter which is in the main directed by these physical properties pushed almost to limit This state of matter the living matter deserves to be called The Living State Mishra proposes that given hydrogenic orbitals atoms showing easy hybridisability and multiple valences molecules with low lying electronic levels loose structure and a metabolic pump in thermodynamically open system various fundamental properties of living state can emerge automatically Structurally these are all known to be present **Short-term Frequency Stability**, 1965 OAR Cumulative Index of Research Results , OAR Cumulative Index of Research Results United States. Hans Joachim Eichler, Peter Günter, Dieter W. Pohl, 2013-06-29 The invention of the laser 25 years ago resulted in powerful light sources which led to the observation of unexpected and striking phenomena. New fields of science such as holography and nonlinear optics developed constituting the basis of this volume. The classical principle of linear superposition of light waves does not hold anymore. Two laser beams crossing in a suitable material may produce a set of new beams with different directions and frequencies. The interaction of light waves can be understood by considering the optical grating structures which develop in the overlap region. The optical properties of matter become spatially modulated in the interference region of two light waves. Permanent holographic gratings have been produced in this way by photographic processes for many years. In contrast, dynamic or transient gratings disappear after the inducing light source, usually a laser, has been switched off. The grating amplitude is controlled by the light intensity. Dynamic gratings have been induced in a large number of solids, liquids, and gases and are detected by diffraction, forced light scattering of a third probing beam, or by self-diffraction of the light waves inducing the grating. The combined interference and diffraction effect corresponds to four-wave mixing (FWM) in the language of nonlinear optics. The process is called degenerate if the frequencies of the three incident waves and the scattered wave are equal. Degenerate four-wave mixing (DFWM) is a simple method to achieve phase conjugation, i.e., to generate a wave which propagates time-reversed with respect to an incident wave.
