An abstract visualization of a quark-gluon plasma lattice. It features a 3D wireframe cube on a black background. The interior of the cube is filled with a dense, chaotic network of thin, multi-colored lines (red, blue, green, yellow, and purple) that represent the complex interactions of quarks and gluons. The lines are more concentrated in some areas and more sparse in others, creating a textured, almost crystalline appearance.

**Quark Gluon Plasma By Particle Correlations in Heavy Ion Collisions** Li Yi,2016-08-25 This thesis covers several important topics relevant to our understanding of quark gluon plasma It describes measurement of the third order harmonic flow using two particle correlations and isolation of flow and non flow contributions to particle correlations in gold gold collisions The work also investigates long range longitudinal correlations in small systems of deuteron gold collisions The former is related to the hydrodynamic transport properties of the quark gluon plasma created in gold gold collisions The latter pertains to the question whether hydrodynamics is applicable to small systems such as deuteron gold collisions and whether the quark gluon plasma can be formed in those small system collisions The work presented in this thesis was conducted with the STAR experiment at the Relativistic Heavy Ion Collider at Brookhaven National Laboratory where the center of mass energy of both collision systems was a factor of 100 larger than the rest mass of the colliding nuclei The results contained in this thesis are highly relevant to our quest for deeper understanding of quantum chromodynamics The results obtained challenge the interpretation of previous works from several other experiments on small systems and provoke a fresh look at the physics of hydrodynamics and particle correlations pertinent to high energy nuclear collisions

**Introduction To High-energy Heavy-ion Collisions** Cheuk-yin Wong,1994-09-30 Written primarily for researchers and graduate students who are new in this emerging field this book develops the necessary tools so that readers can follow the latest advances in this subject Readers are first guided to examine the basic informations on nucleon nucleon collisions and the use of the nucleus as an arena to study the interaction of one nucleon with another A good survey of the relation between nucleon nucleon and nucleus nucleus collisions provides the proper comparison to study phenomena involving the more exotic quark gluon plasma Properties of the quark gluon plasma and signatures for its detection are discussed to aid

future searches and exploration for this exotic matter Recent experimental findings are summarised *JingShin Theoretical Physics Symposium in Honor of Professor Ta-You Wu* Jong-Ping Hsu, Leonardo Hsu, 1998 Prof T Y Wu is not only an eminent physicist with an encyclopedic knowledge but also a motivational teacher and an influential policy maker in science and technology The young Wu was inspired by Prof Y T Yao whose course on modern physics sparked an interest that burned during a long and productive career Among Wu s achievements are 14 books and more than 120 papers covering subjects from atomic and molecular physics to plasmas and gases to atmospheric physics to relativity theory Even at the age of 90 he remains active publishing papers and lecturing on physics Prof Wu feels grateful that he had the opportunity to educate a group of extremely talented students and in particular to discover T D Lee s remarkable talent Although creative talent is no doubt a product of nature it must also be nurtured Prof Wu has played a crucial role for an entire generation of physicists in China and has won great respect from former students such as C N Yang T D Lee K Huang and countless others Prof Wu s love of physics and his dedication in teaching and research will always be remembered
