Quarkonium Production In Highenergy Nuclear Colli:

Quarkonium Production In High-energy Nuclear Collisions, Proceedings Of The Rhic/int 1998 Winter

Workshop Xin-nian Wang, Barbara Jacak, 1999-07-06 Charmonium suppression is a promising signal of quark gluon plasma. In this volume the latest development both in experiments and in the theory of charmonium production in high energy nuclear collisions are presented and discussed.

Extreme States of Matter in Strong Interaction Physics Helmut Satz, 2012-03-17 The thermodynamics of strongly interacting matter has become a profound and challenging area of modern physics both in theory and in experiment. Statistical quantum chromodynamics through analytical as well as numerical studies provides the main theoretical tool while in experiment high energy nuclear collisions are the key for extensive laboratory investigations. The field therefore straddles statistical particle and nuclear physics both conceptually and in the methods of investigation used. This course tested primer addresses above all the many young scientists starting their scientific research in this field providing them with a general self contained introduction that emphasizes in particular the basic concepts and ideas with the aim of explaining why we do what we do. To achieve this goal the present text concentrates mainly on equilibrium thermodynamics: first the fundamental ideas of strong interaction thermodynamics are introduced and then the main concepts and methods used in the study of the physics of complex systems are summarized. Subsequently simplified phenomenological pictures leading to critical behavior in hadronic matter and to hadron quark phase transitions are introduced followed by elements of finite temperature lattice QCD leading to the important results obtained in computer simulation studies of the lattice approach. Next the relation of the resulting critical behavior to symmetry breaking restoration in QCD is clarified before the text turns to the study of the QCD phase diagram. The presentation of bulk equilibrium thermodynamics is completed by studying the properties of the quark gluon plasma as new state of strongly interacting matter. The final chapters of the book are devoted to more specific topics which arise when nuclear collisions are considered as a tool for the experimental study of QCD thermodynamics.

Probing Nucleons And Nuclei In High Energy Collisions - Proceedings Of The Int Program Int-18-3 Alexei Prokudin, Yoshitaka Hatta, Yuri Kovchegov, Cyrille Marquet, 2020-05-29 This book is indexed in Chemical Abstracts Service. This book contains proceedings of the 7 week INT program dedicated to the physics of the Electron Ion Collider EIC, the world's first polarized electron nucleon ep and electron nucleus eA collider to be constructed in the United States. The 2015 NSAC Long Range Plan recommended EIC as the highest priority for new facility construction following the completion of FRIB. The primary goal of the EIC is to establish precise multi dimensional imaging of quarks and gluons inside nucleons and nuclei. This includes i understanding the spatial and momentum space structure of the nucleon through the studies of TMDs (transverse momentum dependent parton distributions), GPD (generalized parton distributions) and the Wigner distribution; ii determining the partonic origin of the nucleon spin; iii exploring the new quantum chromodynamics QCD frontier of ultra strong gluon fields with the potential to

seal the discovery of a new form of dense gluon matter predicted to exist in all nuclei and nucleons at small Bjorken x the parton saturation The program brought together both theorists and experimentalists from Jefferson Lab JLab Brookhaven National Laboratory BNL along with the national and international nuclear physics communities to assess and advance the EIC physics

Multiple Parton Interactions At The Lhc Paolo Bartalini, Jonathan Richard Gaunt, 2018-11-02 Many high energy collider experiments including the current Large Hadron Collider at CERN involve the collision of hadrons Hadrons are composite particles consisting of partons quarks and gluons and this means that in any hadron hadron collision there will typically be multiple collisions of the constituents i.e. multiple parton interactions MPI Understanding the nature of the MPI is important in terms of searching for new physics in the products of the scatters and also in its own right to gain a greater understanding of hadron structure This book aims at providing a pedagogical introduction and a comprehensive review of different research lines linked by an involvement of MPI phenomena It is written by pioneers as well as young leading scientists and reviews both experimental findings and theoretical developments discussing also the remaining open issues
