Robotics Research The Second International Symposium:

Robotics Research Hideo Hanafusa, Hirochika Inoue, 1985 The sixty two contributions in this book are by the world's leading researchers from Japan the United States France The United Kingdom Australia and West Germany They provide a unique opportunity to view the future shape of robotics in such areas as arm and hand design dynamics image understanding locomotion touch and compliance systems kinematics visual inspection control assembly and sensing In five parts the book covers visual perception including topics about representation and recognition of three dimensional objects sensory interaction and vision processors the computational aspect of manipulator control with chapters on kinematics and design and control theory implementation of action covering manipulator and end effector and mobile robots task level planning and theory of manipulation and discussions of industrial applications of robots and key issues of robotics research The first international symposium on robotics research was organized around a view of robotics as the intelligent connection of perception to action Edited by Michael Brady and Richard Paul it was published by The MIT Press in 1984 Hideo Hanafusa is Professor in the Automation Research Laboratory Kyoto University Hirochika Inoue is Professor in the Department of Electrical Engineering The University of Tokyo This book is thirteenth in The MIT Press Series in Artificial Intelligence edited by Patrick Henry Winston and Michael Brady

Proceedings of the 2nd International Conference on the Frontiers of Robotics and Software Engineering (FRSE 2024) Jiangping Hu, Jin Zhang, 2025-03-07 The proceeding of FRSE presents a collection of innovation research in the cutting edge fields of robotics and software engineering It is highlighted within that there are novel methodologies critical analyses and breakthrough results which emphasize the enhanced or amplified results achieved when robotics technologies are integrated with advanced software This book is outfitted with numerous diagrams tables and conceptual frameworks structured to enhance comprehension and accessibility that facilitate a deeper understanding of complex topics The presentation is not just theoretical but includes case studies and real world applications offering a practical approach to complex problem solving techniques across related industries Readers will receive benefits from this comprehensive resource gain a renewed understanding of contemporary challenges and innovative solutions in robotics and software engineering And this book will be a guide and asset for research scholars and professionals in robotics and software engineering looking to apply these cutting edge technologies in impactful ways

Selected papers from the 2nd International Symposium on UAVs, Reno, U.S.A. June 8-10, 2009 Kimon P. Valavanis, Randal Beard, Paul Oh, Aníbal Ollero, Leslie A. Piegl, Hayong Shin, 2011-04-11 In the last decade significant changes have occurred in the field of vehicle motion planning and for UAVs in particular UAV motion planning is especially difficult due to several complexities not considered by earlier planning strategies the increased importance of differential constraints atmospheric turbulence which makes it impossible to follow a pre computed plan precisely uncertainty in the vehicle state and limited knowledge about the environment due to limited sensor capabilities These differences have motivated the increased use of feedback and other

control engineering techniques for motion planning The lack of exact algorithms for these problems and difficulty inherent in characterizing approximation algorithms makes it impractical to determine algorithm time complexity completeness and even soundness This gap has not yet been addressed by statistical characterization of experimental performance of algorithms and benchmarking Because of this overall lack of knowledge it is difficult to design a guidance system let alone choose the algorithm Throughout this paper we keep in mind some of the general characteristics and requirements pertaining to UAVs A UAV is typically modeled as having velocity and acceleration constraints and potentially the higher order differential constraints associated with the equations of motion and the objective is to guide the vehicle towards a goal through an obstacle field A UAV guidance problem is typically characterized by a three dimensional problem space limited information about the environment on board sensors with limited range speed and acceleration constraints and uncertainty in vehicle state and sensor data

Telexistence (2nd Edition) Susumu Tachi, 2014-12-04 Telexistence is a fundamental concept which refers to the general technology that enables a human being to have the real time sensation of being at a place other than where he or she actually exists while being able to interact with the remote environment which may be real virtual or a combination of both It also refers to an advanced type of teleoperation system that enables an operator at the control to perform remote tasks dexterously with the feeling of existing in a surrogate robot working in a remote environment Telexistence in the real remote environment through a virtual environment is also possible This book is the second edition of the original Telexistence new contents cover recent advancements of the technology in areas such as human augmentation autostereoscopy tangible visuo haptic 3D display face to face communication and haptic sensations and technologies Case studies of the mobile mutual telexistence system TELESAR IV and haptic telexistence avatar system TELESAR V are also included Written by the inventor of the concept of this emerging technology it introduces the concept of telexistence explains how this concept can be realized illustrates precisely real examples of the realization of the concept and determines its future advancement Readers will be inspired by the concept and acquire appropriate knowledge on this emerging technology and the fundamental skills to contribute in further development of telexistence

The DARPA Robotics Challenge Finals: Humanoid Robots To The Rescue Matthew Spenko, Stephen Buerger, Karl Iagnemma, 2018-04-09 The DARPA Robotics Challenge was a robotics competition that took place in Pomona California USA in June 2015 The competition was the culmination of 33 months of demanding work by 23 teams and required humanoid robots to perform challenging locomotion and manipulation tasks in a mock disaster site The challenge was conceived as a response to the Japanese Fukushima nuclear disaster of March 2011 The Fukushima disaster was seen as an ideal candidate for robotic intervention since the risk of exposure to radiation prevented human responders from accessing the site This

volume edited by Matthew Spenko Stephen Buerger and Karl Iagnemma includes commentary by the organizers overall analysis of the results and documentation of the technical efforts of 15 competing teams The book provides an important record of the successes and failures involved in the DARPA Robotics Challenge and provides guidance for future needs to be addressed by policy makers funding agencies and the robotics research community Many of the papers in this volume were initially published in a series of special issues of the Journal of Field Robotics We have proudly collected versions of those papers in this STAR volume
