Sandstone Depositional Models:

Sandstone Depositional Models for Exploration George deVries Klein, Ram S. Saxena, 1974 **Sandstone Depositional Models for Exploration for Fossil Fuels** G. Devries Klein, 2012-12-06 The purpose of this monograph is to provide participants in my various short courses with a brief statement of the material I cover in my lectures In addition key illustrations are reproduced for guidance A brief bibliography of reference material is appended to each chapter The bibliographic material includes those references that I consider critical to my remarks No claim is made of topical or bibliographic completeness This monograph also is intended as a brief summary of depositional processes Holocene sediments ancient counterparts of depositional environments and examples of oil and gas bearing stratigraphic traps in five depositional environments This summary is intended to complement lecture and reading courses dealing with sedimentology depositional systems sedimentary facies sedimentary environments sandstone diagenesis and sedimentary modelling as a predictive tool for exploration The student is cautioned however that this monograph is merely an introduction and summary overview of the subject More complete treatments appear in standard textbooks Sedimentology has changed and advanced over the past twenty five years in part because the American oil industry needed to make predictions about the occurrence of the harder to find stratigraphic traps In addition the development of plate tectonic theory and supportive data from the Deep Sea Drilling Project have caused sedimentology to change from an essentially descriptive science to a mature predictive science The 1960s and 1970s in particular witnessed an explosion of new insights and understanding of how sediments are deposited and how sedimentary rocks are formed **Sandstone Depositional Models for Exploration for Fossil Fuels** George Devries Klein, 1985-01-01 *Depositional Models of Shelf and Shoreline Sandstones* Thomas F. Moslow, 1984

Hampson, 2008 Siliciclastic shallow marine deposits record the interface between land and sea and its response to a variety of forcing mechanisms physical process regime the internal dynamics of coastal and shelfal depositional systems relative sea level sediment flux tectonic setting and climate These deposits have long been the subject of conceptual stratigraphic models that seek to explain the interplay between these various forcing mechanisms and their preservation in the stratigraphic record This volume arose from an SEPM research conference on shoreline shelf stratigraphy that was held in Grand Junction Colorado on August 24 28 2004 The aim of the resulting volume is to highlight the development over the last 15 years of the stratigraphic concepts and models that are used to interpret siliciclastic marginal marine shallow marine and shelf deposits *From Depositional Systems to Sedimentary Successions on the*

Norwegian Continental Margin Allard W. Martinius, R. Ravnås, J. A. Howell, R. J. Steel, J. P. Wonham, 2014-10-06 The Norwegian Continental Shelf NCS focus of this special publication is a prolific hydrocarbon region and both exploration and production activity remains high to this day with a positive production outlook A key element today and in the future is to couple technological developments to improving our understanding of specific geological situations The theme of the publication reflects the immense efforts made by all industry operators and their academic partners on the NCS to understand in detail the structural setting sedimentology and stratigraphy of the hydrocarbon bearing units and their source and seal The papers cover a wide spectrum of depositional environments ranging from alluvial fans to deepwater fans in almost every climate type from arid through humid to glacial and in a variety of tectonic settings Special attention is given to the integration of both analogue studies and process based models with the insights gained from extensive subsurface datasets Sedimentology and Depositional Environments of the Lower Permian Yeso Formation, Northwestern New Mexico

John D. Stanesco, Geological Survey (U.S.), 1991 A multidisciplinary approach to research studies of sedimentary rocks and their constituents and the evolution of sedimentary basins both ancient and modern **Stratigraphic Reservoir Characterization for Petroleum Geologists, Geophysicists, and Engineers** Roger M. Slatt, 2013-11-21 Shallow marine environments from the shoreline to the shelf edge are complex and result in complex deposits In turn complex deposits translate into complex reservoirs To maximize reservoir performance it is imperative that we understand the type of shallow marine deposit that makes up the reservoir That is not an easy task as is exemplified by the various interpretations that have been assigned to linear sandstones of the U S Cretaceous Western Interior Seaway These sandstones in both outcrop and subsurface reservoirs have been interpreted to be offshore shelf bars or ridges shoreface bodies and incised valley fill Interpreting the type of deposit is not merely an academic exercise it is essential because each of these different types of sandstone bodies is characterized by different geometries and degrees of compartmentalization There are numerous examples of shoreface deposits that are truncated by younger incised valley fill Subtle variations in gamma ray log response can be used to identify such strata Barrier island deposits provide a particularly challenging reservoir characterization problem Because of the variety of sedimentary processes that can influence barrier island formation several different sandstone and shale geometries and trends can occur That variation in geometries can lead to the potential for a high degree of compartmentalization that is difficult to predict Again depositional geometry prediction and well placement are facilitated by an understanding of the nature of the deposit and how it was formed **Clastic Hydrocarbon Reservoir**

Sedimentology Xinghe Yu, Shengli Li, Shunli Li, 2018-04-03 This book presents a comprehensive assessment of clastic sedimentology and its application to reservoir geology It covers the theoretical foundations of the topic and its use for scientists as well as professionals in the field Further it addresses all aspects of reservoir sedimentology clastic sequence stratigraphy sedimentation reservoir diagenesis and heterogeneity as well as depositional systems alluvial fluvial lacustrine

Owen, Joel S. Leventhal, Paula L. Hansley, Russell F. Dubiel, Steven M. Condon, Christine E. Turner-Peterson, Neil S. Fishman, 1989 **The Geology of Fluvial Deposits** Andrew D. Miall, 2013-12-20 Fluvial deposits represent the preserved record of one of the major nonmarine environments

They accumulate in large and small intermontane valleys in the broad valleys of trunk rivers in the wedges of alluvial fans flanking areas of uplift in the outwash plains fronting melting glaciers and in coastal plains. The nature of alluvial assemblages, their lithofacies, composition, vertical stratigraphic record, and architecture reflect an interplay of many processes from the wandering of individual channels across a floodplain to the long-term effects of uplift and subsidence. Fluvial deposits are a sensitive indicator of tectonic processes and also carry subtle signatures of the climate at the time of deposition. They are the hosts for many petroleum and mineral deposits. This book is about all these subjects. The first part of the book, following a historical introduction, constructs the stratigraphic framework of fluvial deposits step by step, starting with lithofacies, combining these into architectural elements and other facies associations, and then showing how these in turn combine to represent distinctive fluvial styles. Next, the discussion turns to problems of correlation and the building of large-scale stratigraphic frameworks. These basin-scale constructions form the basis for a discussion of causes and processes, including autogenic processes of channel shifting and cyclicity, and the larger questions of allogenic tectonic, eustatic, and climatic sedimentary controls, and the development of our ideas about nonmarine sequence stratigraphy.
