

Solar Neutrino Detection

The neutrinos coming from the sun are all electron type neutrinos (ν_e):

They come in many different energies (from 0.1 - 16 MeV).

We can detect them here on Earth with:

LARGE (due to low neutrino interaction rate)

UNDERGROUND (to reduce cosmic ray background (mostly μ^{\pm}))

Particle Physics: Perspectives And Opportunities - Report Of The Dpf Committee On Long-term Planning Robert N Cahn, Roberto Peccei, Michael E Zeller, Jonathon A Bagger, David G Cassel, Paul D Grannis, Frank J Sciulli, 1995-09-20 This book is the result of a broad based and in depth study of high energy physics commissioned by the Executive Committee of the Division of Particles and Fields of the American Physical Society This year long study was initiated in the early 1994 in the wake of the cancellation of the SSC

and is meant to complement the report of the Drell HEPAP subpanel charged with providing a vision for the future of the field. The DPF study of high energy physics was organized on the basis of the working groups each led by a number of co-conveners chosen among established leaders in the various subspecialties in the field. These conveners in turn organized their working groups by inviting other active workers in the discipline to participate and gathered further input from the community by holding a variety of specialized meetings and workshops. This book contains the final reports of the 11 working groups assembled for the study along with an extended overview and executive summary by the editors.

Astroparticle Physics - Proceedings Of The International School Dimitri V Nanopoulos, 1991-11-15. The interface between particle physics and cosmology known as astroparticle physics can play a key role in our understanding of the universe. This international school cosponsored by the Houston Advanced Research Center (HARC) and the Superconducting Super Collider Laboratory (SSC) was proposed as an effort to coordinate the explosion in knowledge and attract researchers to this fascinating discipline.

Encyclopedia Of Cosmology, The - Set 2: Frontiers In Cosmology (In 3 Volumes) Claudia De Rham, Andrew J Tolley, 2023-09-21. The second set of The Encyclopedia of Cosmology in three volumes continues this major long-lasting seminal reference at the graduate student level laid out by the most prominent researchers in the general field of cosmology. Together these volumes will be a comprehensive review of the most important current topics in cosmology, discussing the important concepts and current status in each field covering both theory and observation. These three volumes are edited by Dr Giovanni Fazio from the Center for Astrophysics, Harvard-Smithsonian, with each volume authored or edited by specialists in the area: Modified Gravity by Claudia de Rham and Andrew Tolley; Imperial College; Neutrino Physics and Astrophysics edited by Floyd Stecker, NASA Goddard Space Flight Center; Black Holes edited by Zoltan Haiman, Columbia University. These volumes follow the earlier publication in 2020 of The Encyclopedia of Cosmology which comprises the following four volumes: Galaxy Formation and Evolution by Rennan Barkana, Tel Aviv University; Numerical Simulations in Cosmology edited by Kentaro Nagamine, Osaka University; University of Nevada; Dark Energy by Shinji Tsujikawa, Tokyo University of Science; and Dark Matter by Jihn E Kim, Seoul National University. The Encyclopedia aims to provide an overview of the most important topics in cosmology and serve as an up-to-date reference in astrophysics.
