Superconductivity And Particle Detection - Proceedings Of The International Workshop

G Waysand,A Morales,T A Girard,1995-03-07 Superconductors today constitute a major focus of activity in the development of high resolution detectors for many applications This volume collects the papers of an international workshop on the basic theoretical and experimental issues involved in the interaction between particles and superconductors It emphasizes the involved condensed matter aspects of non equilibrium time dependent Ginzburg Landau equations metastable superconductivity quasiparticle and phonon lifetimes and quasiparticle trapping as well as low noise pulse electronics detector fabrication and low background cryogenics

Production Yield of Muon-Induced Neutrons in Lead

Holger Kluck,2015-07-28 The work presented in this book is a major step towards understanding and eventually suppressing background in the direct search for dark matter particles scattering off germanium detectors Although the flux of cosmic muons is reduced by many orders of magnitude in underground laboratories the remaining energetic muons induce neutrons through various processes neutrons that can potentially mimic a dark matter signal This thesis describes the measurement of muon induced neutrons over more than 3 years in the Modane underground laboratory The data are complemented by a thorough modeling of the neutron signal using the GEANT4 simulation package demonstrating the appropriateness of this tool to model these rare processes As a result a precise neutron production yield can be presented Thus future underground experiments will be able to reliably model the expected rate of muon induced neutrons making it possible to develop the necessary shielding concept to suppress this background component

Low Temperature Physics and Chemistry ,1996 Proceedings of the International Conference on Radioscience, Equatorial Atmospheric Science and Environment and Humanosphere Science, 2021

Erma Yulihastin,Prayitno Abadi,Peberlin Sitompul,Wendi Harjupa,2022-09-29 This book presents recent advances in the area of Radioscience Equatorial Atmospheric Science and Environment from the international symposium for equatorial atmosphere of the celebration of the Equatorial Atmosphere Radar EAR 20th Anniversary conducted by Indonesian National Institute of Aeronautics and Space LAPAN and Kyoto University in 2021 It provides a scientific platform for all participants to discuss ideas and current issues as well as to design solutions in the areas of atmospheric science environmental science space science and related fields

Neutrino Physics

E. Bellotti,Y. Declais,P. Strolin,2003-12-08 Neutrino physics contributed in an fundamental way to the progress of science opening important windows of knowledge in elementary particle physics as well in astrophysics and cosmology Substantial experimental efforts are presently dedicated to improve our knowledge on neutrino properties as in fact we don t know yet some of the basic ones Although very significant steps forward have been done neutrino masses and mixings still remain

largely unknown and constitute an important field for future research Are neutrinos Majorana or Dirac particles Have they a magnetic moment Historically studies on weak processes and therefore on neutrino physics provided first the Fermi theory of weak interactions and then the V A theory Finally the observation of weak neutral currents provided the first experimental evidence for unification of weak and electromagnetic interactions by the so called Standard Model of elementary particles In addition to the results obtained from the measurement of the solar neutrino flux the study of atmospheric neutrinos strongly supports the hypothesis of neutrino oscillation among different flavours At the same time the detection of neutrinos emitted by our Sun gave an important confirmation that the Sun produces energy via a chain of nuclear reactions in particular in our Sun a specific cycle the hydrogen cycle is responsible for practically all the produced energy

History of Original Ideas and Basic Discoveries in Particle Physics Harvey B. Newman, Thomas Ypsilantis, 2012-12-06 The International Conference on the History of Original Ideas and Basic Discoveries held at the Ettore Majorana Centre for Scientific Culture in Erice Sicily July 27 August 4 1994 brought together sixty of the leading scientists including many Nobel Laureates in high energy physics principal contributors in other fields of physics such as high Tc superconductivity particle accelerators and detector instrumentation and thirty six talented younger physicists selected from candidates throughout the world The scientific program including 49 lectures and a discussion session on the Status and Future Directions in High Energy Physics was inspired by the conference theme The key experimental discoveries and theoretical breakthroughs of the last 50 years in particle physics and related fields have led us to a powerful description of matter in terms of three quark and three lepton families and four fundamental interactions The most recent generation of experiments at e e and proton proton colliders and corresponding advances in theoretical calculations have given us remarkably precise determinations of the basic parameters of the electroweak and strong interactions These developments while showing the striking internal consistency of the Standard Model have also sharpened our view of the many unanswered questions which remain for the next generation the origin and pattern of particle masses and families the unification of the interactions including gravity and the relation between the laws of physics and the initial conditions of the universe
