Kemp, Tracey Hollowood, 2017-02-21. Sensory evaluation is a scientific discipline used to evoke, measure, analyse and interpret responses to products perceived through the senses of sight, smell, touch, taste and hearing. It is used to reveal insights into the way in which sensory properties drive consumer acceptance and behaviour and to design products that best deliver what the consumer wants. It is also used at a more fundamental level to provide a wider understanding of the mechanisms involved in sensory perception and consumer behaviour. Sensory perception of products alters considerably during the course of consumption. Special techniques are used in product development to measure these changes in order to optimise product delivery to consumers. *Time Dependent Measures of Perception in Sensory Evaluation* explores the many facets of time dependent perception including mastication and food breakdown, sensory specific satiety and sensory memory. Both traditional and cutting edge techniques and applications used to measure temporal changes in sensory perception over time are reviewed and insights into the way in which sensory properties drive consumer acceptance and behaviour are provided. This book will be a valuable resource for sensory professionals working in academia and industry including sensory scientists, practitioners, trainers and students and industry based researchers in QA, QC, R & D and marketing. **History of Soymilk**

Microbiology and Biochemistry of Cheese and Fermented Milk B.A. Law, 2012-12-06 The first edition of *Advances in the Microbiology and Biochemistry of Cheese and Fermented Milk* was aimed at the gap in the literature between the many excellent technical texts on the one hand and the widely scattered scientific literature on the other We tried to present the state of the art in pre competitive research in a predigested yet scientifically coherent form and relate it to the marketable properties of fermented dairy products In this way researchers could use the book to mentally step back from their specializations and see how far they had progressed as a community at the same time we hoped that R D based companies could use it to assess the utility or lack of it of the research output in setting out their research acquisition strategy for product improvement and innovation In a sense the first edition could claim to have initiated Technology Foresight in its limited field before Government caught the idea and it certainly gave the science base an opportunity to display its talents and resources as a potential source of wealth creation well before this became an official function of publicly funded science and technology Thus the first edition was intended as a progressive move within the growing science and technology literature and judged by its market success it seems to have served precisely that purpose
