Low-Dimensional Systems Luis M. Liz-Marzan, Michael Giersig, 2014-01-15 *Low-Dimensional Systems: Theory, Preparation, and Some Applications* Luis M. Liz-Marzán, Michael Giersig, 2012-12-06 This volume contains papers presented at the NATO Advanced Research Workshop ARW Dynamic Interactions in Quantum Dot Systems held at Hotel Atrium in Puszczkowo near Poznan Poland May 16 19 2002 The term low dimensional systems which is used in the title of this volume refers to those systems which contain at least one dimension that is intermediate between those characteristic of atoms molecules and those of the bulk material Depending on how many dimensions lay within this range we generally speak of quantum wells quantum wires and quantum dots As such an intermediate state some properties of low dimensional systems are very different to those of their molecular and bulk counterparts These properties generally include optical electronic and magnetic properties and all these are partially covered in this book The main goal of the workshop was to discuss the actual state of the art in the broad area of nanotechnology The initial focus was on the innovative synthesis of nanomaterials and their properties such as quantum size effects superparamagnetism or field emission These topics lead us into the various field based interactions including plasmon magnetic spin and exciton coupling The newer more sophisticated methods for characterization of nanomaterials were discussed as well as the methods for possible industrial applications In general chemists and physicists as well as experts on both theory and experiments on nanosized regime structures were brought together to discuss the general phenomena underlying their fields of interest from different points of view

A. Kotov, 2016-04-19 Cubes triangular prisms nano acorn nano centipedes nanoshells nano whiskers Now that we can create nanoparticles in a wide variety of shapes and morphologies comes the next challenge finding ways to organize this collection of particles into larger and more complex systems Nanoparticle Assemblies and Superstructures edit Colloidal Synthesis of Plasmonic Nanometals Luis Liz-Marzán, 2020-04-23 Noble metal nanoparticles have attracted enormous scientific and technological interest because of their unique optical properties which are related to surface plasmon resonances The

interest in nanosized metal particles dates back to ancient societies when metals were used in various forms as decorative elements. From the famous Lycurgus cup made by the Romans in the 4th century AD through thousands of stained glasses in churches and cathedrals all over medieval Europe, bright yellow, green or red colors have been obtained by a touch of metallic additions during glass blowing. This peculiar interaction of light with nanometals can be widely tuned through the morphology and assembly of nanoparticles, thereby expanding the range of potential applications from energy and information storage to biomedicine, including novel diagnostic and therapeutic methods. This book compiles recent developments that clearly illustrate the state of the art in this cutting edge research field. It comprises different review articles written by the teams of Prof. Luis Liz-Marzán, an international leader in chemical nanotechnology who has made seminal contributions to the use of colloid chemistry methods to understand and tailor the growth of metal particles at the nanoscale. Apart from synthesis, the book also describes in detail the plasmonic properties of nanomaterials and illustrates some representative applications. This book will appeal to anyone involved in nanotechnology, nanocrystal growth, nanoplasmonics and surface enhanced spectroscopies.
