Lower Old Sandstone Of Strathmore Region:

The Lower Old Red Sandstone of the Strathmore Region M. Armstrong, Ian Brown Paterson, 1970 The Geology of Scotland, 4th edition N. H. Trewin, 2003-02-24 This 4th edition of The Geology of Scotland is greatly expanded from the previous edition with 34 authors contributing to 20 chapters A new format has been adopted to provide a different perspective on the geology of Scotland A brief introduction is followed by a chapter outlining some of the important historical aspects that in the 19th century placed Scottish geologists in the forefront of a new science Scotland is constructed from a number of terranes that finally combined in roughly their present positions prior to about 410 million years ago Thus the geology of each terrane is described up the time of amalgamation providing chapters on the Southern Uplands Midland Valley Highlands Grampian and Hebridean terranes At the end of this section a brief synthesis summarizes the events that resulted in the amalgamation of the various terranes into the present configuration Traditional practice is followed in the description of the Old Red Sandstone Carboniferous Permo Trias Jurassic Cretaceous tertiary and Quaternary strata A separate chapter covers Tertiary igneous rocks An attempt is made to tell the story of the geological evolution of Scotland rather than catalogue all areas and formations Priority is given to the onshore geology encouraging the reader to go into the field and visit some of the world class geology on show in Scotland The chapters are broadly based attempting to integrate the sedimentary and igneous histories and summarize changes in palaeogeography and palaeoenvironments Economic aspects are covered with chapters on Metalliferous Minerals Bulk Resources Coal and Hydrocarbons A new departure is the chapter on aspects of Environmental Geology and sustainability Additionally this publication contains a colour section of 32 plates illustrating aspects of Scottish Geology as well as a coloured geological map of Scotland **New Perspectives on the Old Red Sandstone** Geological Society of London, 2000 Geological History of Britain and Ireland Nigel H. Woodcock, R. A. Strachan, 2009-04-01 Britain Ireland and their surrounding areas have a remarkably varied geology for so small a fragment of continental crust This region contains a fine rock record from all the geological periods from Quaternary back to Cambrian and a less continuous but still impressive catalogue of events back through nearly 2500 million years of Precambrian time This protracted geological history would have been interesting enough to reconstruct if it had been played out on relatively stable continental crust However Britain and Ireland have developed instead at a tectonic crossroads on crust traversed intermittently by subduction zones and volcanic arcs continental rifts and mountain belts The resulting complexity makes the geological history of this region at once fascinating and perplexing Geological History of Britain and Ireland tells the geological story of the region at a level accessible to undergraduate geologists as well as to postgraduates professionals or informed amateurs The book takes a multi disciplinary rather than a purely stratigraphical approach and aims to bring to life the processes behind the catalogue of historical events Full coverage is given to the rich Precambrian and Early Palaeozoic history as well as to later events more relevant to hydrocarbon exploration The book is profusely

illustrated and contains guides to further reading and full references to data sources making it an essential starting point for more detailed studies of the regional geology All British Earth science undergraduates will be required to spend some time studying British Geological History and this book will be the only one available to British undergraduates The book takes a process based approach rather than simply describing the regional stratigraphy Lavishly illustrated with high quality Applied Geochemistry in the 1980's Iain Thornton, R. Howarth, 1986-05 **Alluvial Sedimentation M.** Marzo, C. Puigdefabregas, 2009-04-15 Most of the thirty four papers contained in this Special Publication arise from the Fourth International Conference on Fluvial Sedimentology held in Spain in 1989 Sections deal with various aspects of sediment transport and hydraulics in flume experiments and modern rivers the analysis of alluvial facies geomorphic and structural controls on alluvial sedimentation alluvial stratigraphy and basin analysis and finally the exploration and exploitation of ores A professional reference to the most recent research in fluvial sedimentology An international expert authorship Transactions of the Geological Society of Glasgow Geological Society of Glasgow, 1920 **Transactions** Transactions of the Geological Society of Glasgow ,1927 Geological Society of Glasgow, 1927 Palaeozoic Palaeogeography and Biogeography W.
