Leuven,A.M.J. Ragas,A.J.M. Smits,G.van der Velde,2007-12-20 All over the world sustainable river basin management is a leading principle of policy plans and legal instruments for water management e g the European Water Framework Directive The evidence however to underpin the full scope of sustainability is rather scanty In this book an integrative perspective on trends and challenges in river science and management is demonstrated The three pillars underneath sustainable water management ecology economy and sociology are elaborated by experts in their fields A number of papers integrate the current knowledge on the structure functioning and management of living rivers The book includes data and experiences concerning the rivers Allier Meuse Rhine Sava and Tagliamento in Europe and the river Illinois in the USA Sustainable river basin management asks for un orthodox rehabilitation programmes and ecosystem based and transboundary management approaches The Living Church ,1946 Australian Performers, Australian Performances Peter Pinne,1987 *A Living Landscape* Stijn Arnoldussen,2008 Today half the Netherlands is below sea level Because of this water management is of key importance when it comes to maintaining present day habitation of the Dutch low lands In prehistory however large parts of the Dutch landscape were highly dynamic due to ongoing fluvial sedimentation Vast deltaic areas with ceaseless river activity formed the backdrop against which prehistoric occupation took place Although such landscapes may seem inhospitable the often excellently preserved archaeological evidence indicates that people lived in these lowlands throughout prehistory This book describes why Bronze Age farmers were keen to settle here and how these prehistoric communities structured the landscape around their house sites at various scales Using a vast body of evidence from several large scale excavations in the Dutch river area the author reconstructs the changes in the cultural landscape over time Starting from the Middle Neolithic changing preferences for settlement site locations and changes in domestic architecture are traced in detail to the Iron Age However for proper understanding of the cultural landscape not only settlements but also graves and patterns of object deposition and their landscape characteristics are discussed By using evidence from over 50 major excavations yielding over 300 house plans this book contains by far the richest data set on Dutch Bronze Age settlements Most of these results have not previously been published in English making this book of over 500 pages a true academic treasure for an international audience The in depth presentation of Bronze Age settlement sites as well as the critical discussion of models and premises current in later prehistoric settlement archaeology have an important

relevance stretching beyond the Dutch lowland areas on which it is based The wealth of high quality Dutch data is presented as a synthesized yet well annotated narrative that rises above mere site interpretation even more so due to its landscape scale focus Therefore this book is a must have for those interested in later prehistoric cultural landscapes and settlement archaeology

Earth, Our Living Planet Philippe Bertrand,Louis Legendre,2021-04-21 Earth is to our knowledge the only life bearing body in the Solar System This extraordinary characteristic dates back almost 4 billion years How to explain that Earth is teeming with organisms and that this has lasted for so long What makes Earth different from its sister planets Mars and Venus The habitability of a planet is its capacity to allow the emergence of organisms What astronomical and geological conditions concurred to make Earth habitable 4 billion years ago and how has it remained habitable since What have been the respective roles of non biological and biological characteristics in maintaining the habitability of Earth This unique book answers the above questions by considering the roles of organisms and ecosystems in the Earth System which is made of the non living and living components of the planet Organisms have progressively occupied all the habitats of the planet diversifying into countless life forms and developing enormous biomasses over the past 3 6 billion years In this way organisms and ecosystems took over the Earth System and thus became major agents in its regulation and global evolution There was co evolution of the different components of the Earth System leading to a number of feedback mechanisms that regulated long term Earth conditions For millennia and especially since the Industrial Revolution nearly 300 years ago humans have gradually transformed the Earth System Technological developments combined with the large increase in human population have led in recent decades to major changes in the Earth s climate soils biodiversity and quality of air and water After some successes in the 20th century at preventing internationally environmental disasters human societies are now facing major challenges arising from climate change Some of these challenges are short term and others concern the thousand year evolution of the Earth s climate Humans should become the stewards of Earth

Major Events in the History of Life J. William Schopf,1992 Major Events in the History of Life present six chapters that summarize our understanding of crucial events that shaped the development of the earth s environment and the course of biological evolution over some four billion years of geological time The subjects are covered by acknowledged leaders in their fields span an enormous sweep of biologic history from the formation of planet Earth and the origin of living systems to our earliest records of human activity Several chapters present new data and new syntheses or summarized results of new types of analysis material not usually available in current college textbooks

Rural Food Security and Living Standard in Humid Zones of Nigeria Eunice Oluyemisi Obamiro,2004 Food insecurity is an important element in the poverty that is plaguing Nigeria Dealing with the issue entails tackling the problems faced by the principal food producers which are the rural smallholder farmers Using the farming systems approach this book focuses on an exposition of the underlying factors affecting food insecurity and poor living standard among rural families in the humid zones of Nigeria Through multistage stratified sampling procedure primary

data was collected by field survey from 31 villages in Osun state The analytical tools include descriptive statistics econometric and the goal programming model Specific peculiarities of each household member was utilised for deriving calorie balance Results show that poor living standard and food insecurity could be adduced to poor infrastructure low input and resource availability 59% and 41% of the households are calorie sufficient and deficient respectively Modelling results reveal the negative impact of increasing risk factors that guides production decisions and some level of resource under utilisation and misallocation in actual practice partly adduced to risk avoidance behaviours therefore the greater potential for farm families to be able to meet up with their food security goals through appropriate actions Impact assessments show the need for improved cropping practices credit facilities land tenure changes and changes in the cocoa sector to improve food security
