Reproductive Biology and Phylogeny of Fishes, Vol 8B: Part B: Sperm Competition Hormones Barrie G M

Jamieson, 2019-09-12 The animals loosely termed fish constitute more than half of all known vertebrate species. There are approximately 27 000 described living species of bony fishes Euteleostomi Osteichthyes about 70 species of hagfishes and some 34 species of lampreys. Approximately 970 species are chondrichthyans the sharks and their relatives which were the subject of volume 3 in this series. It is perhaps because fishes live in a buoyant medium whether it be fresh or sea water that they show a diversity in body shapes that is unparalleled by other vertebrates. There is also a unique diversity in the modes of reproduction whether by external or internal fertilization and this with the morphology and fine structure of the reproductive system and its components is the subject of Part A. Part B deals with complementary topics: testes sperm and sperm competition endocrinology of reproduction pheromones and reproduction copulatory structures taxonomic overview and the potential for sexual selection sexual selection signaling and courtship adaptation and evolution of reproductive mode in copulating cottoid species fertilization sex determination parental care reproduction in relation to conservation and exploitation of marine fishes Cryopreservation of Gametes Embryogenesis and Development and Molecular Genetics of Development.

The Antarctic Silverfish: a Keystone Species in a Changing Ecosystem Marino Vacchi, Eva Pisano, Laura Ghigliotti, 2017-05-03 This book encompasses the body of available scientific information on the notothenioid fish *Pleuragramma antarctica* commonly known as Antarctic silverfish. This plankton feeder of the intermediate trophic level is the most abundant fish in the coastal regions of high Antarctica and plays a pivotal ecological role as the main prey of top predators like seals penguins whales and Antarctic toothfish. Broad circum polar distribution a key role in the Antarctic shelf pelagic ecosystem and adaptations makes understanding the species likely response to environmental change relevant to foresee the potential responses at the local ecosystem level. Additionally a detailed understanding of the abundance and trophic interactions of such a dominant keystone species is a vital element of informing the development of marine spatial planning and marine protected areas in the Antarctic continental shelf region. Experts in the field provide here unique insights into the evolutionary adaptation eco physiology trophic ecology reproductive and population ecology of the Antarctic silverfish and provide new clues about its vulnerability in facing the challenges of the ongoing environmental changes.

Eastman, 2013-10-22 This important volume provides an original synthesis and novel overview of Antarctic fish biology detailing the evolution of these fish in some of the most unusual and extreme environments in the world Focusing on one group of fish the notothenioids which contain the majority of the current organismal diversity this book describes a fauna that has evolved in isolation and experienced incredible adaptive radiation by acquiring numerous physiological specializations Darwin's finches and African cichlids may be joined by Antarctic fishes as exemplars of adaptive radiation The book's coverage is detailed and comprehensive and the author clearly recognizes the fact that these fish are a component of a most interesting and biologically unique ecosystem and environment Topics in Antarctic Fish Biology include past and present environments fossil records taxonomic composition of fauna systematic relationships diversification and physiological adaptations Modelling the Effects of Blasting on Rock Breakage V.A. Borovikov, I.F. Vanyagin, 2020-11-25 This work provides a translation of Modelirovanie deistviya vzriva pri razruzenii gornikh porod Moscow 1990 Presenting theories of simulating blast effects in elastic and elastoplastic media it covers topics such as the classical and modern methods for modelling rock breakage by blasting Role of Internal Friction in Dynamic Analysis of Structures A.A. Kusainov, A.I. Tseitlin, 2021-06-23 Improvement in the methods of analysis of structures machines aircrafts and ships is one of the most important problems in engineering today The computational aspects of this problem are being tackled successfully due to developments in computer science However for an adequate description of the physical properties of structures especially those made of newer non traditional materials it is essential to further study their behaviour under different load and kinematic conditions and to develop appropriate physical models that provide a comprehensive and correct description of the actual state of deformation The objective of this book is to adopt a unified approach for describing the large number of models of internal friction and to offer

recommendations regarding the methods of taking it into account at the time of dynamic analysis It is also intended to provide a comprehensive analysis of the various models accompanied by detailed solutions of specific problems which could serve as examples for dynamic analysis of real structures taking into account the effect of internal friction
