Collaborative Networks and Their Breeding Environments Luis M. Camarinha-Matos, Hamideh Afsarmanesh, Angel Ortiz, 2006-03-09 Progress in collaborative networks continues showing a growing number of manifestations and has led to the acceptance of Collaborative Networks CN as a new scientific discipline Contributions to CN coming from multiple reference disciplines has been extensively investigated In fact developments in CN have benefited from contributions of multiple areas namely computer science computer engineering communications and networking management economy social sciences law and ethics etc Furthermore some theories and paradigms defined elsewhere have been suggested by several research groups as promising tools to help define and characterize emerging collaborative organizational forms Although still at the beginning of a long way to go there is a growing awareness in the research and academic world for the need to establish a stronger theoretical foundation for this new discipline and a number of recent works are contributing to this goal From a utilitarian perspective agility has been pointed out as one of the most appealing characteristics of collaborative networks to face the challenges of a fast changing socio economic context However during the last years it became more evident that finding the right partners and establishing the necessary preconditions for starting an effective collaboration process are both costly and time consuming activities and therefore an inhibitor of the aimed agility Among others obstacles include lack of information e g non availability of catalogs with normalized profiles of organizations and lack of preparedness of organizations to join the collaborative process Overcoming the mismatches resulting from the heterogeneity of potential partners e g differences in infrastructures corporate culture methods of work and business practices requires considerable investment Building trust a pre requisite for any effective collaboration is not straight forward and requires time Therefore the effective creation of truly dynamic collaborative networks requires a proper context in which potential members are prepared to rapidly get engaged in collaborative processes The concept of breeding environment has thus emerged as an important facilitator for wider dissemination of collaborative networks and their practical materialization The PRO VE 05 held in Valencia Spain continues the 6th event in a series of successful working conferences on virtual enterprises This book includes selected papers from that conference and should become a valuable tool to all of those interested in the advances and challenges of collaborative networks

H. Erik Andriessen,Matti Vartiainen,2005-09-23 Dear Reader This is a book about mobile virtual work It aims at clarifying the basic concepts and showing present practices and future challenges The roots of the book are in the collaboration of few European practitioners and searchers who met each other under the umbrella of the Swedish SALTSA programme see next page in January 2002 in Stockholm The group was first called ICT Mobility and Work Organisation but redefined itself quickly as Mobile Virtual Cooperative Work group The change of the name reflects the development of reasoning in the group We could not find much material on mobile work certainly not

systematic studies though a growing interest in mobile technologies and services could be found Practices of telework and virtual organizations were better known but we were convinced that the combination with mobile work was something different and new Our main target became to understand what it was all about The next step was an expert meeting in October 2004 at Rönneby Castle again in Sweden A wider group of experts was invited to present their views on mobile virtual work and ideas about book chapters from different perspectives of working life Some of the expertise could be found through the network of the AMI Work family created by the New Working Environments unit of the European Commission's Information Society Directorate General Also close collaboration was developed with the related MOSAIC program
