Mosquitoes of India Brij Kishore Tyagi, 2025-06-09

This is an up-to-date and comprehensive handbook that presents a wealth of information on the different aspects of one of the largest dipterous family, Culicidae, mosquitoes. India shares more than 10% of the global mosquito fauna, and some of the deadliest mosquito species occur in the country, implying that globally India has always been in the forefront of research and control of such deadly and/or debilitating diseases as malaria, lymphatic filariasis, dengue, chikungunya, Zika, Japanese encephalitis, West Nile Virus, etc. This book illustrates updated information, including chemical, biological, herbal, and genetical, on the control of vectors and showcases mosquito preponderance in the neighbouring countries. The book additionally deals with the biosafety principles in theory and practice, use of emerging science of artificial intelligence in mosquito identity and control, and of course, consideration of mosquitoes in human psyche. This authoritative account is a crucial reference source for mosquito-borne disease control and prevention. This book is meant for researchers, university

Florida Health Notes, 1911 **Mosquito Hunters (A history of hostilities against man's deadliest foe - the mosquito - since 1881)** B. K. Tyagi, 2021-01-12 The book also tells the story of some of the mosquito species that contribute to human diseases such as malaria filariasis dengue Zika chikungunya and Japanese encephalitis These diseases have played an important role in slowing down the national progress through depleted economy health and intelligentsia The country spends almost 50% of its health budget in fighting against these ailments Therefore it emerges that besides the brutal facts of how the mosquito has insinuated itself into human history from the malaria that devastated invaders of ancient Rome Alexander The Great had reportedly died due to Plasmodium falciparum malaria while returning home after the battle with the Indian king Poru in the malaria infested Punjab region the story of man's struggle to live with the mosquito from the early 19th Century malaria defeat in Mian Mir under direct charge of Dr Samuel Rickard Christophers who advocated to Dr Ronald Ross's theory of environment sanitation to the malaria deaths of hundreds of rural inhabitants living in The Thar Desert's irrigated Command Area under the world famous Indira Gandhi Nahar Pariyojana in the early 1990s and to the recent panic over the chikungunya virus in Kerala as well as many other States and Union Territories crippling thousands of people in 2006 and deaths from dengue all over the country during 2012-14 need to be told to the modern generation of medical entomologists and vector borne disease specialists to relive the moments of victories and defeats in this vicious age old battle between man and mosquito At the end we find that we have only ourselves to be blamed to a great extent for accelerating the spread of mosquitoes and the diseases they transmit with climate change and increased international travel mosquito borne illnesses are flaring up all over the globe Catastrophic failures of mosquito control have ensured that worldwide even now one person dies of malaria every twelve seconds This book describes in a mosquito's eye view how mosquito breeds rests feeds flies mate and dies besides interaction with her natural enemies The book also deals with the current constraints and future control prospects of mosquito control In view of the increasing resistance to insecticides and chemotherapy the book throws light on the subject of greatest promise to ending mosquitoes' deadly assault on man by rendering them impotent by genetic manipulation by replacing them through paratransgenesis involving micro organisms such as bacteria and fungi
