Understanding the effects of natural and human induced changes on the global environment and their implications requires a foundation of integrated observations of land sea air and space on which to build credible information products forecast models and other tools for making informed decisions The 2007 National Research Council report on decadal survey called for a renewal of the national commitment to a program of Earth observations in which attention to securing practical benefits for humankind plays an equal role with the quest to acquire new knowledge about the Earth system NASA responded favorably and aggressively to this survey embracing its overall recommendations for Earth observations missions technology investments and priorities for the underlying science As a result the science and applications communities have made significant progress over the past 5 years However the Committee on Assessment of NASA's Earth Science Program found that the survey vision is being realized at a far slower pace than was recommended principally because the required budget was not achieved Exacerbating the budget shortfalls NASA Earth science programs experienced launch failures and delays and the cost of implementing missions increased substantially as a result of changes in mission scope increases in launch vehicle costs and or the lack of availability of a medium class launch vehicle under estimation of costs by the decadal survey and unfunded programmatic changes that were required by Congress and the Office of Management and Budget In addition

the National Oceanic and Atmospheric Administration NOAA has made significant reductions in scope to its future Earth environmental observing satellites as it contends with budget shortfalls Earth Science and Applications from Space A Midterm Assessment of NASA's Implementation of the Decadal Survey recommends a number of steps to better manage existing programs and to implement future programs that will be recommended by the next decadal survey The report also highlights the urgent need for the Executive Branch to develop and implement an overarching multiagency national strategy for Earth observations from space a key recommendation of the 2007 decadal survey that remains unfulfilled The Science of the Earth DK,2022-10-18 Elegant design combined with beautiful images to explore and explain Earth's natural riches This is an informative visually arresting introduction to planet Earth The core of the ebook features large detailed photographs of single objects many of them small enough to be held in one hand that each speak volumes about an aspect of Earth's environments and how they work For example bubbles of ancient air trapped inside an Antarctic ice core reveal how Earth's climate has changed over time A piece of pumice thrown several miles into the air by a volcano helps explain what happens when tectonic plates collide The ebook is structured around an imaginary journey that takes the reader from the inner core to Earth's surface including both land and oceans and up to the top of the atmosphere Taking in environments such as grasslands forests and reefs the coverage includes both living and inanimate realms Feature spreads each throw a spotlight on an iconic place such as the Amazon Rainforest or the Dead Sea or a particular process such as glacial erosion Many of the most fascinating parts of the natural world are beyond reach This beautiful informative ebook brings them up close and within our grasp *1992 NASA Authorization* United States.
