Michelson,1991      *Expert Systems in Mineral and Metal Processing* A. J. Niemi,S.L. Jamsa-Jounela,2016-09-01 Within the metal and mining industries the use of expert systems for monitoring and control is on the increase The content of each paper had to include both expert systems neural networks or fuzzy control The papers were evenly contributed from industry universities and research institutes thus this book provides a valuable insight into the theoretical as well as the practical applications currently in use within the industry      *Manufacturing Decision Support Systems* Hamid R. Parsaei,Thomas R. Hanley,S.S. Kolli,2012-12-06 During the last two decades a tremendous growth in the popularity and applications of computers in manufacturing has occurred Computer aided design computer aided manufacturing flexible manufacturing

systems group technology and many others are considered by many manufacturing executives as the most promising technologies and philosophies that if successfully implemented can reduce costs and enable the US manufacturing companies to become more competitive in the global market In the computer integrated manufacturing environment the decision processes are often more involved The decision makers are frequently required to have access to a vast amount of data to support and analyze their complex decision problems at strategic and tactical levels Decision support systems are often referred to as computer based information technologies that allow the decision makers to interactively communicate and solve the decision problems Manufacturing Decision Support Systems is intended to report the latest developments and address the central issues in this area This volume consists of 14 refereed chapters written by leading researchers from academia and industry

Effective Business Intelligence Systems Robert J. Thierauf, 2001-06-30 One step above knowledge management systems are business intelligence systems Their purpose is to give decision makers a better understanding of their organization s operations and thus another way to outmaneuver the competition by helping to find and extract the meaningful relationships trends and correlations that underlie the organization s operations and ultimately contribute to its success Thierauf also shows that by tying critical success factors and key performance indicators into business intelligence systems an organization s most important financial ratios can also be improved Comprehensive and readable Thierauf s book will advance the knowledge and skills of all information systems providers and users It will also be useful as a text in upper level courses covering a wide range of topics essential to an understanding of executive business systems generally and specifically their creation and management The theme underlying Thierauf s unique text is that a thorough understanding of a company s operations is crucial if the company is to be moved to a higher level of competitive advantage Although data warehousing data mining the Internet the World Wide Web and other electronic aids have been in place for at least a decade it is the remarkable and unique capability of business intelligence systems to utilize them that has in turn revolutionized the ability of decision makers to find accumulate organize and access a wider range of information than was ever before possible Effective business intelligence systems give decision makers a means to keep their fingers on the pulse of their businesses every step of the way From this it follows that they are thus able to develop new more workable means to cope with the competition successfully Comprehensive and readable Thierauf s book will advance the knowledge and skills of all information systems providers and users It will also be useful as a text in upper level courses covering a wide range of topics essential to an understanding of

executive business systems generally and specifically their creation and management      Systematic Introduction to Expert Systems Frank Puppe, 2012-12-06 At present one of the main obstacles to a broader application of expert systems is the lack of a theory to tell us which problem solving methods are available for a given problem class Such a theory could lead to significant progress in the following central aims of the expert system technique Evaluating the technical feasibility of expert system projects This depends on whether there is a suitable problem solving method and if possible a corresponding tool for the given problem class Simplifying knowledge acquisition and maintenance The problem solving methods provide direct assistance as interpretation models in knowledge acquisition Also they make possible the development of problem specific expert system tools with graphical knowledge acquisition components which can be used even by experts without programming experience Making use of expert systems as a knowledge medium The structured knowledge in expert systems can be used not only for problem solving but also for knowledge communication and tutorial purposes With such a theory in mind this book provides a systematic introduction to expert systems It describes the basic knowledge representations and the present situation with regard to the identification realization and integration of problem solving methods for the main problem classes of expert systems classification diagnostics construction and simulation      **Putting Expert Systems to**

**Work in Logistics** Mary Kay Allen, Omar Keith Helferich, 1990      *Building Knowledge-Based Systems for Natural Resource Management* Daniel L. Schmoldt, H. Michael Rauscher, 2012-12-06 If one were forced to use a single key word to describe the decade of the 1980 s a very prominent one would be technology Leading the forefront of technology advancement were breakthroughs in electronics Devices that were uncommon or unknown in 1980 became commonplace and almost indispensable by 1989 This trend has continued into the 1990 s and it does not seem to be abating in any way Microwave ovens video recorders telephone answering machines compact disc players computers and a host of smaller or less sophisticated devices now appear in most households The development of small and inexpensive computers i e personal computers has placed computing resources within reach of many more people In addition many traditional and largely mechanical devices have been enhanced by electronics For example specialized microprocessors are combined with arrays of electronic sensors to control and monitor sophisticated engineering components in most new automobiles In this and many other ways we are touched by the new electronics in almost every aspect of our daily lives Initially personal computers were little more than toys They contained only a small fraction of the computing power of their immediate ancestors the mini computers and mainframe computers However rapid improvements in integrated circuit design and chip manufacture produced regular reductions in size and cost of computer components During the same time processor speed and sophistication increased
