

# QUALITATIVE ELEMENTAL ANALYSIS

- Qualitative determination of elements present.
- Remember that all organic compounds will contain C and H, other commonly found elements will be O, N, S, Halogens and various metals. That can be detected by reaction with sodium metal.
- Qualitative Analysis of Organic Compounds (Sodium fusion Test or Lassaigue Test)
- *Sodium Fusion (TEST FOR SULFUR, NITROGEN, AND HALOGEN)*
- The nonpolar nature of organic compounds make the detection of N,S and X difficult because organic compounds don't ionize in solution to give ions of these elements. For this reason it necessary to convert this elements into inorganic ions before doing the test
- This is achieved by heating the organic substance with sodium metal which converts the above elements to the corresponding sodium salts: sulfur is converted to sodium sulfide, nitrogen to sodium cyanide and halogen to sodium halide.
