Qualitative Aspects of Large Scale Systems O. I. Franksen, P. Falster, F. J. Evans, 2014-01-15
Large Scale Systems O.I. Franksen, **Large Scale Systems** H. P. Geering, M. Mansour, 1987 **Large Scale Systems: Theory and Applications** 1989 K. Reinisch, M. Thoma, 1990-06-08 The papers present new trends on the development of theory and applications in the field of large scale systems analysis planning and control The issues discussed are proving to be of great importance as systems of growing complexity are found in all fields of human activities often developed by economic organizational and technological effects The papers are divided into three main areas of interest Modelling Analysis Basic Controls Superordinate Controls and Decisions Applications **Nonlinear Time-discrete Systems** M. Gössel, 2006-04-11 **Computer Aided Design in Control Systems** 1988 Zhen-Yu Chen, 2017-05-03 This volume contains 73 papers presenting the state of the art in computer aided design in control systems CADCS The latest information and exchange of ideas presented at the Symposium illustrates the development of computer aided design science and technology within control systems The Proceedings contain six plenary papers and six special invited papers and the remainder are divided into five themes CADCS packages CADCS software and hardware systems design methods CADCS expert systems CADCS applications with finally a discussion on CADCS in education and research **Reliability, Survivability and Quality of Large Scale Telecommunication Systems** Peter Stavroulakis, 2003-09-11 Competition within the telecommunications companies is growing fiercer by the day Therefore it is vital to ensure a high level of quality and reliability within all telecommunications systems in order to guard against faults and the failure of components and network services Within large scale systems such quality and reliability problems are ever higher The metrics of Quality and Reliability have to date only been available in journals and technical reports of companies which have designed or produced major parts of systems used in large applications This book provides a self contained treatment enabling the reader to be able to produce define and utilise the metrics of Quality and Reliability required for the design and implementation of a large application such as a world class event as the Olympic Games An additional outcome is that this book can be used as a guide for producing an ISO standard for large scale Systems such as the Olympic Games Provides presentations of techniques used for solving quality and reliability problems in telecommunications networks replete with illustrations of their applications to real world services and world class events Individual chapters written by respective international experts within their fields This will prove highly informative for Practising engineers researchers and telecommunications professionals academics and graduate students in telecommunications standards bodies and organisations such as ISO **An Index** A. V. Balakrishnan M. Thoma, 2013-11-21 *Global and Large Scale System Models* B. Lazarevic, 1979-09-01 *Dynamic Modelling and Control of National Economies* 1983 T. Basar, L. F. Pau, 2014-05-17 *Dynamic Modelling and Control of National Economies* 1983 contains the proceedings of the Fourth IFAC IFORS IIASA Conference and the 1983 SEDC Conference on Economic

Dynamics and Control held at Washington D C USA on June 17 19 1983 Separating the 65 papers presented in the conference as chapters this book covers a broad class of problems or notions arising both in economic theory control applications to planning and implementation issues Some chapters discuss multi level interactions of government and private sectors in economic development inflation and economic policy in an open economy foreign debt and exchange rate stability in a developing country and expectations in numerical general equilibrium models This book also explains a rational decision making process for resource policymaking inference of the structure of economic reasoning from natural language analysis modeling and analysis of a national economy and methodological issues in global modeling Econometric analysis of the economic effects of population change aspects of optimal estimation control strategies in econometrics and optimal policies for interdependent economies are also discussed This book will be useful to those engaged in economic and control theory research Transactions on Large-Scale Data- and Knowledge-Centered Systems VI Abdelkader Hameurlain, Josef

Küng, Roland Wagner, Stephen W. Liddle, Klaus-Dieter Schewe, Xiaofang Zhou, 2012-09-22 The LNCS journal Transactions on Large Scale Data and Knowledge Centered Systems focuses on data management knowledge discovery and knowledge processing which are core and hot topics in computer science Since the 1990s the Internet has become the main driving force behind application development in all domains An increase in the demand for resource sharing across different sites connected through networks has led to an evolution of data and knowledge management systems from centralized systems to decentralized systems enabling large scale distributed applications providing high scalability Current decentralized systems still focus on data and knowledge as their main resource Feasibility of these systems relies basically on P2P peer to peer techniques and the support of agent systems with scaling and decentralized control Synergy between grids P2P systems and agent technologies is the key to data and knowledge centered systems in large scale environments This the sixth issue of Transactions on Large Scale Data and Knowledge Centered Systems contains eight extended and revised versions of papers selected from those presented at DEXA 2011 Topics covered include skyline queries probabilistic logics and reasoning theory of conceptual modeling prediction in networks of moving objects validation of XML integrity constraints management of loosely structured multi dimensional data data discovery in the presence of annotations and quality ranking for Web articles

Large Scale Systems: Theory and Applications 1998 N.T. Koussoulas, P.P. Groumpos, 1999-06-11 As the 21st century nears there is a need to seriously reconsider many aspects of modeling and controlling large complex man made systems Integration of technologies and functions requires deep interdisciplinary expertise and technical breadth for successful implementation Large scale systems theory can play a central role in this effort and it is a strongly held belief that this approach will continue to be of major importance in the future **Input-Output Analysis of Large-Scale Interconnected Systems** M. Vidyasagar, 1981 This book is intended to be a fairly comprehensive treatment of large scale interconnected systems from an input output viewpoint Prior to treating the question of stability and instability we study both the

decomposition and the well posedness of such systems It is not necessary for the reader to have studied feedback stability before tackling this book as we develop results concerning feedback systems as special cases of more general results pertaining to large scale systems However the reader should know some elementary functional analysis e g Lebesgue spaces contraction mapping theorem and have some general knowledge e g Perron Frobenius theorem The first chapter is introductory and chapters 2 and 3 contain background material after that the remaining chapters are essentially independent and can be read in any order
