Qualitative Representation Of Spatial Knowledge:

Qualitative Representation of Spatial Knowledge Daniel Hernandez,1994-06-28 This book develops for the first time a qualitative model for the representation of spatial knowledge based only on locative relations between the objects involved The core of this book is devoted to the study of qualitative inference methods that take into account the rich structure of space These methods can be applied to quite a number of areas characterized by uncertain or incomplete knowledge as for example geographic information systems robot control computer aided architectural design and natural language information systems

Qualitative Representation of Spatial Knowledge Daniel Hernández,1994 *Qualitative Spatial Reasoning with Topological Information* Jochen Renz,2003-07-31 Spatial knowledge representation and reasoning with spatial knowledge are relevant issues for many application areas such as robotics geographical information systems and computer vision Exceeding purely quantitative approaches more recently initiated qualitative approaches allow for dealing with spatial information on a more abstract level that is closer to the way humans think and speak Starting out with the qualitative topological constraint calculus RCC8 proposed by Randell Cui and Cohn this work presents answers to a variety of open questions regarding RCC8 The open issues concerning computational properties are solved by exploiting a broad variety of results and methods from logic and theoretical computer science Questions concerning practical performance are addressed by large scale empirical computational experiments The most impressive result is probably the complete classification of computational properties for all fragments of RCC8

Default reasoning and the qualitative representation of spatial knowledge Daniel Hernández,Kai Zimmermann,1993 *Mental Representation and Processing of Geographic Knowledge*

Thomas Barkowsky,2003-07-01 In cognitive science mental representations of spatial knowledge are metaphorically referred to as cognitive maps However investigations in cognitive psychology reveal that the cognitive map metaphor is inadequate and that more suitable conceptions of human spatial knowledge processing are needed This book addresses mental processing of knowledge about geographic space from an AI point of view by presenting an experimental computational modeling approach Results about human memory and visual mental imagery from cognitive psychology are combined with AI techniques of spatial and diagrammatic knowledge processing The author develops the diagrammatic reasoning architecture MIRAGE as a comprehensive conception of human geographic knowledge processing

Representation and Processing of Knowledge About Distances in Environmental Space Bettina Berendt,1999 Knowledge about distances along with knowledge about spatial direction is one of the most important fundamentals for a cognitive agent s orientation navigation and route planning However only some distances can be perceived directly Therefore knowledge about distances must often be inferred from other sources of information In cognitive science research on spatial cognition this is investigated in different ways using empirical studies computer simulations and knowledge representation approaches This book presents a comprehensive interdisciplinary study of human distance cognition It discusses results on knowledge about distances from

artificial intelligence research and cognitive psychology proposing an integrating formal framework Focusing on knowledge about route distances it then presents a computational model of the way in which humans infer knowledge about distances in environmental spaces like cities or buildings **Knowledge-Based Intelligent Information and Engineering Systems** Rajiv Khosla,Robert J. Howlett,2005-08-30 The four volume set LNAI 3681 LNAI 3682 LNAI 3683 and LNAI 3684 constitute the refereed proceedings of the 9th International Conference on Knowledge Based Intelligent Information and Engineering Systems KES 2005 held in Melbourne Australia in September 2005 The 716 revised papers presented were carefully reviewed and selected from nearly 1400 submissions The papers present a wealth of original research results from the field of intelligent information processing in the broadest sense topics covered in the fourth volume are innovations in intelligent systems and their applications data mining and soft computing applications skill acquisition and ubiquitous human computer interaction soft computing and their applications agent based workflows knowledge sharing and reuse multi media authentication and watermarking applications knowledge and engineering techniques for spatio temporal applications intelligent data analysis and applications creativity support environment and its social applications collective intelligence computational methods for intelligent neuro fuzzy applications evolutionary and self organizing sensors actuators and processing hardware knowledge based systems for e business and e learning multi agent systems and evolutionary computing ubiquitous pattern recognition neural networks for data mining and knowledge based technology in crime matching modelling and prediction *Spatial Cognition* Seán Ó Nualláin,2000-11-23 Spatial Cognition brings together psychology computer science linguistics and geography discussing how people think about space our internal cognitive maps and spatial perception and how we communicate about space for instance giving route directions or using spatial metaphors The technological applications adding dynamism to the area include computer interfaces educational software multimedia and in car navigation systems On the experimental level themes as varied as gender differences in orientation and of course wholly unrelated the role of the hippocampus in rodent navigation are described Much detailed analysis and computational modeling of the structure of short term memory STM is discussed The papers were presented at the 1998 annual meeting of the Cognitive Science Society of Ireland Mind III Series B **Principles of Knowledge Representation and Reasoning** A. Cognitive and Linguistic Aspects of

Geographic Space D.M. Mark,Andrew U. Frank,2012-12-06 This book contains twenty eight papers by participants in the NATO Advanced Study Institute ASI on Cognitive and Linguistic Aspects of Geographic Space held in Las Navas del Maxques Spain July 8 20 1990 The NATO ASI marked a stage in a two year research project at the U S National Center for Geographic Infonnation and Analysis NCOIA In 1987 the U S National Science Foundation issued a solicitation for proposals to establish

the NCGIA and one element of that solicitation was a call for research on a fundamental theory of spatial relations We felt that such a fundamental theory could be searched for in mathematics geometry topology or in cognitive science but that a simultaneous search in these two seemingly disparate research areas might produce novel results Thus as part of the NCGIA proposal from a consortium consisting of the University of California at Santa Barbara the State University of New York at Buffalo and the University of Maine we proposed that the second major Research Initiative two year multidisciplinary research project of the NCOIA would address these issues and would be called Languages of Spatial Relations The grant to establish the NCOIA was awarded to our consortium late in 1988
