Ethnographies of Science Education Carol Brandt, Heidi B Carlone, 2015-09-25 Researchers who conduct ethnography in science education tend to have a deep commitment for transforming science to improve the lives of people in

underserved communities This edited volume explores how contemporary ethnographers in science education bring to light the local production of scientific knowledge and the ways it is implicated in larger social and political struggles Ethnographies in science education contribute to understanding the experiences of linguistically racially and economically diverse populations who have been historically excluded from participation in science An anthropological approach has also been instrumental in explicating the situated practices by which students enact science in the classroom and in their lives beyond schools This edited volume brings together ethnographers in science education to contribute a global perspective on science teaching and learning in school and university classrooms at home and after school programs Included are examples of ethnography in science education from the UK Argentina Canada and the USA in which contributors point to promising directions for theorizing the culture of science education as we undertake educational reform The authors in this volume argue that ethnography is not only a valid approach for the study of science education but also they contend that it is essential to the development of more equitable practices for instruction and learning This book was originally published as a special issue of *Ethnography and Education*

In Search of Unity Spencer Scouler, 2013 Albert Einstein once wrote The supreme task of the physicist is to arrive at those universal laws from which the cosmos can be built up by pure deduction Remarkably in this book we arrive at those universal axioms from which universal science can be built up by pure deduction Within the prevailing paradigm of science the mathematical philosophy of nature we show it is not possible to unify science To overcome this limitation we introduce a new more general paradigm Since the new paradigm is a generalisation of the mathematical philosophy of nature we are able to retain the mathematical knowledge built up within the prevailing paradigm Within the new paradigm we introduce four empirical universal axioms from which we deduce that it is not possible to mathematically unify the two fundamental theories of physics quantum theory and general relativity Instead from the universal axioms we logically deduce the first symmetry of nature the first invariance of nature the universal arrow of time the universal laws of nature and the three universal dynamic theories of nature quantum theory general relativity and universal evolution The first symmetry of nature and first invariance of nature arise from the constancy of the universal laws of nature not only being a symmetry but a unifying symmetry The biological view of

universal evolution provides a new theory of biological evolution that replaces what we show is the deficient neo Darwinian synthesis In a similar way theories of evolution in all the sciences are based on their respective views of universal evolution From the universal axioms we deduce the universal features of nature thereby unifying physics chemistry biology psychology sociology economics and all of science This book is written for scientifically inclined general readers teachers students scientists philosophers physicists chemists biologists psychologists sociologists and economists
