Advanced Technologies and Methodologies for Risk Management in the Global Transport of Dangerous Goods C. Bersani,A. Boulmakoul,E. Garbolino,2008-09-23 In the last few years logistics has become a strategic factor for development and competition In fact research and development activities have traditionally faced the management of supply chain and international transport focussing on two main aspects speed and efficiency However several vulnerabilities have recently been highlighted under a safety and security viewpoint The weakness of the logistic chains has become more evident with the beginning of the new millennium Terrorist attacks such as the 11th of September 2001 in the USA have caused the introduction of new rules and procedures which affect the overall logistics showing the vulnerability of the global economy So nowadays it would appear anachronistic to carry out an exhaustive research activity on the supply chain with no relation to the various typologies of risk which may affect it This book aims to effectively represent the current status of research on dangerous goods transport

Regulations for the Safe Transport of Radioactive Materials, 1985 Edition International Atomic Energy Agency, 1988 Transportation for the Nuclear Industry D.G. Walton, S.M. Blackburn, 2012-12-06 The transport requirements of the nuclear industry are unique in many respects This is not because cargoes are particularly large or hazardous by comparison with other industries but because standards of performance required in every aspect of the activity are so much greater than those required for any other industry Transport of nuclear materials is subject to existing statutory regulations applied not only nationally but internationally In addition to this users of transport demand the highest standards of performance for their own purposes particularly in the area of quality assurance Similar considerations also apply to the transport of non nuclear materials where the transport link often has to tie in with project management and quality assurance requirements Safety and security of nuclear materials are of paramount importance but even when these aspects are of a completely acceptable standard public attitudes to the transport activities have to be addressed adequately The transport system itself consists of many components The route the vehicles the containers and the individual packages The performance of each component determines the performance of the total system all these factors were presented in the 1988 Conference on Transportation for the Nuclear Industry giving a broad overview of current practice together with wide ranging consideration of future requirements and developments *Applicability of IAEA Safety Standards to Non-Water Cooled Reactors and Small Modular Reactors* IAEA, 2023-06-12 In response to an increase in global activities related to non water cooled reactors and small modular reactors this new Safety Report documenting areas of novelty of these technologies when compared to the current fleet of reactors has been developed The impact of these areas of novelty on the applicability and completeness of the IAEA safety standards is assessed in the publication Gaps and areas for additional consideration are identified The review undertaken to develop this report encompassed the safety standards related to the lifetime of these reactor technologies The publication also considers the interface between safety security and safeguards in the design of these technologies Quality Assurance of Pharmaceuticals World Health Organization, 2007 Quality assurance of pharmaceutical products is a continuing concern of WHO Despite efforts made around the world to ensure a supply of quality and effective medicines substandard spurious and counterfeit products still compromise health care delivery in many countries To respond to the global need for adequate quality assurance of pharmaceuticals WHO's Expert Committee on Specifications for Pharmaceutical Preparations has over the years made numerous recommendations to establish standards and guidelines and to promote the effective functioning of national regulatory and control systems and the implementation of internationally agreed standards by trained personnel Many of the relevant documents endorsed by the Committee are reproduced in this volume providing guidance covering all aspects of good manufacturing practices GMP Important texts on inspection are also included Most of the material has been published separately in the Expert Committee's reports This

compendium brings it together to make it more accessible and of greater practical value to those working in faculties of pharmacy in medicines regulation and control and in the pharmaceutical industry This is the second updated edition of the compendium and includes texts published in 2005 and 2006 in the WHO Technical Report Series
