BY NC ND open access license Never before have the scope and limits of scientific freedom been more important or more under attack New science from artificial intelligence to gene editing creates unique opportunities for making the world a better place It also presents unprecedented dangers This book is about the opportunities and challenges moral regulatory and existential that face both science and society How are scientific developments impacting on human life and on the structure of societies How is science regulated and how should it be regulated Are there ethical boundaries to scientific developments in sensitive areas Such are the questions that the book seeks to answer Both the survival of humankind and the continued existence of our planet are at stake *EBOOK: CONCEPTS OF FITNESS & WELLNESS* CORBIN,2015-10-28

EBOOK CONCEPTS OF FITNESS WELLNESS **Pharmaceuticals to Nutraceuticals** Dilip Ghosh,R. B. Smarta,2016-10-26 Recently there has been a fundamental shift in the global health and wellness industry from disease treatment to preventing chronic diseases The use of nutraceuticals and functional foods in prevention efforts could lead to a decreased dependency on drugs The pharmaceutical industry recognizes this shift however serious concerns have arisen regarding the claimed efficacy quality and safety of products used as medical foods This book examines the consumer and industry mindshift including the scientific evidence of these foods as effective adjuncts to pharmacotherapy during all stages of treatment of various diseases thus indicating that pharmaceuticals and nutraceuticals can and should coexist It details quality safety and efficacy of foods drugs and nutrients marketing and product positioning regulatory perspectives biomarkers and metabolites probiotics food drug interactions and future industry trends In addition food bioactives represent diet based molecules that perform physiological roles related to disease prevention and treatment As such a considerable overlap exists between food bioactives and drugs this book presents the case for comparing and contrasting foods versus drugs in several models of health and disease **Lifespan Neurorehabilitation** Dennis Fell,Karen Y Lunnen,Reva Rauk,2018-01-02 The neuro rehab text that mirrors how you learn and how you practice Take an evidence based approach to the neurorehabilitation of adult and pediatric patients across the lifespan that reflects the APTA s patient management model and the WHO s International Classification of Function ICF You ll study examination and interventions from the body structure function impairments and functional activity limitations commonly encountered in patients with neurologic disorders Then understanding the disablement process you ll be able to organize the clinical data that leads to therapeutic interventions for specific underlying impairments and functional activity limitations that can then be applied as appropriate anytime they are detected regardless of the medical diagnosis Promoting Healthy Aging Across the Lifespan Elena Carrillo-Alvarez, Miriam Rodriguez-Monforte,Jordi Vilaró, Katherine Simone McGilton,2024-12-26 Worldwide there is a generalized trend toward aged societies Between 2015 and 2050 the proportion of the world s population over 60 years will nearly double from 12% to 22% As life expectancy continues to increase and natality rates lower not only the composition of countries will change but also its health landscape However an increased life expectancy does not necessarily mean a healthy

life In most high income countries more than 20% of those years are lived in ill health due to chronic conditions caused by non communicable diseases which compromises functional ability and well being key components of healthy aging In this way not only people s lives but also societal structures are being affected Based on the life course approach to healthy aging aging starts from conception In this regard the promotion of healthy aging requires preventive strategies that enhance capacities during growth and development maintain them for as long as possible after maturity and slow down their rate of decline Moreover considering healthy aging across the lifespan entails focusing on different factors life opportunities and choices that might significantly influence health status lifestyle as well as health and social inequalities in older age and challenges the focus of most research on the topic which exclusively investigates the effect of influences operating in the later stages of life
