Quality Issues in Clinical Genetic Services Ulf Kristoffersson,Jörg Schmidtke,J. J. Cassiman,2010-06-25 Initially genetic disorders were all considered as rare diseases At present in the mid of 2009 the OMIM catalogue contains information on more than 12 000 entries of which about 2500 are available for clinical testing based on the identification of the responsible gene defect However altogether it has been estimated that about 8 percent of a population in the economically developed countries will during their lifetime suffer from a disease mainly as the result of their genetic constitution Adding to that it is estimated that all diseases have a genetic component which will determine who will be at a higher than average risk for a certain disorder Further it is postulated that in the near future this genetic profiling could become useful in selecting an appropriate therapy adapted to the genetic constitution of the person Thus genetic disorders are not rare Measuring quality of health care related processes became an issue in the 1990s mainly in laboratory medicine but also for hospitals and other health care systems In many countries national authorities started to implement recommendations guidelines or legal procedures regulating quality of health care delivery In laboratory medicine in parallel the use of accreditation as a method assuring high quality standards in testing came in use With the increasing possibilities of performing molecular genetic testing genetic laboratories needed to become involved in this process As many genetic disorders are rare most laboratories worldwide offered analysis for a specific set of disorders and therefore very early on a transborder flow of samples occurred While international quality criteria ISO have been in existence for a number of years the regulation of quality issues still may differ between countries Based on their personal experience in the varying fields of quality research and clinical implementation of quality criteria in genetic services the authors of thisbook share their experience and give examples of the implementation of quality issues in national quality systems worldwide This book which is the result of the effort of many persons is destined to aid laboratory managers and counsellors health care managers and other stakeholders in national or international health care service to improve the services to the benefit of patients with suspected genetic disorders **Managing International Connectivity, Diversity of Learning and Changing Labour Markets** Ka Ho Mok,2016-08-10 This book examines how major Asian cities have enhanced their global competitiveness by transforming their higher education systems to equip their graduates with global competence It primarily focuses on policy implications and urban governance especially comparing how governments are responding to the growing challenges of

international connectivity and are managing the diversity of populations resulting from an increasingly globalized world
