Cunningham, Xuefei Yang, 2012-06-25 Many mushrooms or the fruits of fungi are extremely valuable wild gathered products which are utilised for both their medicinal properties and as food In many of the world's tropical and temperate forests they are the primary source of income for the people who live there These forests range from temperate woodlands and small forests to high altitude forests in the Himalaya and tropical miombo woodlands in south central Africa In south west China over 200 species of wild fungi in 64 genera are commercially traded while in Europe and North America woodlands and small forests are the source of many highly prized mushrooms and an essential resource for many small enterprises and collectors Yet the increased demand for timber has resulted in the rapid expansion of forestry which in turn has destroyed the natural habitat of many fungi unbalancing both forest economics and ecology Despite the economic social and cultural values of fungi there is a general lack of understanding of their importance to local livelihoods and forest ecology This book aims to fill this gap and extends the People and Plants Conservation Series beyond the plant kingdom into the related world of fungi and mushrooms It demonstrates the crucial roles that fungi play in maintaining forest ecosystems and the livelihoods of rural people throughout the world while providing good practice guidelines for the sustainable management of this resource and an assessment of economic value It brings together the perspectives of biologists anthropologists and forest and woodland

Britt, 2014-03-05 When seeking to test specific hypotheses in large data sets social and behavioral scientists often construct models Although useful in such situations many phenomena of interest do not occur in large samples and do not lend themselves to precise measurement In addition a focus on hypothesis testing can constrict the potential use of models as organizing devices for emerging patterns summaries of what we believe we know about the dynamics of situation This book bridges the gap between quantitative and qualitative modelers to reconcile the need to impose rigor and to understand the influence of context Although there are many different uses for models there is also the realistic possibility of doing credible research without their use A critical reexamination of the assumptions used in quantitatively oriented models however suggests ways to increase their effectiveness as organizers of both quantitative and qualitative data Students of methods in psychology sociology education management social work and public health and their instructors are increasingly expected to become familiar with both quantitative and qualitative approaches Unfortunately they find few vehicles for communication regarding the implications of overlapping work between the two approaches Using models as organizing devices for a better dialogue between assumptions and data might facilitate this communication process      *Quantitative Anthropology* Leslie Lea Williams, Kylie Quave, 2019-03-21 Quantitative Anthropology A Workbook contributes an anthropological perspective to quantitative methods The book s authors address characteristics of quantitative data entering and manipulating data in SPSS graphical displays distributions and measures of central tendency and dispersion and including hypothesis testing with both parametric and nonparametric statistical tests Increasingly complex exercises build on cumulative learning from chapter to chapter and stress the application of methods beyond coursework The focus of the manual is on univariate statistical analysis and the book is written to be accessible to higher level undergraduate students and graduate students in all fields of anthropology Uses anthropological examples from the subdisciplines of sociocultural anthropology biological anthropology and archaeology to illustrate quantitative data techniques Integrates quantitative techniques with theoretical fluency encouraging the reader to make connections between Big Picture questions in anthropology and the methods used to address those questions Focuses on the practical use of Excel and SPSS to apply quantitative methods to anthropological contexts Includes exercises in both parametric and nonparametric inferential statistics as well as descriptive statistics      Research Methods for Political Science David E.
