Social Context and Cognitive Performance Pascal Huguet, Jean-Marc Monteil, 2013-05-24 Based on twenty years of research on the social regulation of academic performances this book offers theoretical and empirical arguments in favour of the inclusion of the social dimension of human beings as essential for their cognitive activities We all engage in social interactions compare ourselves with other people belong to social groups and are the object of a myriad of categorisations Not only do such social experiences affect cognition but they actually determine its form and its content Several experiments indeed reveal that cognitive performance depends on the relationship between the individual and the social context in which cognition takes place And this relationship is not forged directly by features of the situation but rather by personal construals of these features most notably social comparison This fact alone justifies granting the individual's social experiences a psychological status and it further strengthens the key idea of this book namely that the social context only exists through the intervention of cognitive processes of contextualization producing a cognitive context of the self such as those involved in autobiographical memory A social psychology of cognition is suggested in which the fashionable distinction between cognition and social cognition makes no sense From this innovative perspective it is indeed more the social nature of the individual rather than that of the object to be processed that defines the social nature of cognition Well known phenomena such as social facilitation and social loafing as well as established educational practices are also re-examined from this perspective

The Social Psychology of Collective Action Sara Breinlinger, Caroline Kelly, 2014-04-23 In recent years there has been a growth of single issue campaigns in western democracies and a proliferation of groups attempting to exert political influence and achieve social change In this context it is important to consider why individuals do or don't get involved in collective action for example in the trade union movement and the women's movement Social psychologists have

an important contribution to make in addressing this question The social psychological approach directly concerns the relationship between the individual and society and a number of theories have been developed in the field particularly by contemporary European researchers Yet surprisingly there has never been until now a concerted attempt to bring these various strands of research together in a coherent detailed presentation of the social psychological approach to collective action The authors of *The Social Psychology of Collective Action* review and integrate a number of theories developed in this field as well as presenting their own original research and data The research discussed in the book ranges over a number of different contexts with a particular focus on women s groups organizing around issues of gender Questions addressed include why do women get involved in women s groups What part is played by experiences of discrimination in the family and in the workplace What are the benefits of group involvement How are feminist activists perceived by others who choose not to get involved Findings from questionnaires and interviews are integrated with contemporary social psychological theory especially social identity theory

War, Community, and Social Change Dario Spini,Guy Elcheroth,Dinka Corkalo Biruski,2013-08-13 Collective experiences in the former Yugoslavia documents and analyses how social representations and practices are shaped by collective violence in a context of ethnic discourse What are the effects of violence and what are the effects of collectively experienced victimisation on societal norms attitudes and collective beliefs This volume stresses that mass violence has a de and re structuring role for manifold psychosocial processes A combined

psychosocial approach draws attention to how most people in the former Yugoslavia had to endure and cope with war and dramatic societal changes and how they resisted and overcame ethnic rivalry violence and segregation It is a departure from the mindset that depict most people in the former Yugoslavia as either blind followers of ethnic war entrepreneurs or as intrinsically motivated for violence by deep rooted intra ethnic loyalties and inter ethnic animosities
