Ronald de Kloet, 2013-10-22 Steroid hormones are unique compounds in that they are active at the interface of peripheral endocrine events and neural mechanisms Thus their effects present an important peripheral signaling system to alter brain function This volume presents state of the art and classical techniques for the study of steroid hormones and their receptors and their effects and actions Comprehensive protocols included for the study of Steroid kinetics and metabolism Steroid receptors Molecular and cellular effects of Neurobiology of Cytokines Errol B. De Souza, 2013-10-22 Neurobiology of steroids Steroid effects on integrated systems Cytokines Part A provides an overview of the effects of cytokines in the brain and in the endocrine system The book discusses the general aspects of cytokines including the endogenous agonists and antagonists their receptors their second messengers and transport mechanisms for cytokines across the blood brain barrier The text also describes the anatomical localization of cytokines cytokine receptors and their respective mRNA in brain and in endocrine tissues The methods for evaluating the in vivo as well as in vitro actions of cytokines on hormone secretion are also considered The book further tackles the synthesis and release of cytokines and their central nervous system actions and the methodology for studying the role of cytokines in human neuropathological conditions **Computers and Computations in the Neurosciences** P. Michael Conn, 2013-10-22 Methods in Neurosciences Volume 10 Computers and Computations in the Neurosciences discusses the use of computers in the neurosciences The book deals with data collection analysis and modeling with emphasis on the use of

computers Section I involves data collection using a personal microcomputer system One paper presents a tutorial on using a PC based motor control composed of an electronic circuit to adjust the motion of a light microscope stage through a software program Other papers discuss computer methods in nuclei cartography and a computer assisted quantitative receptor autoradiography in studying receptor density distribution Section II deals with data analysis and some computer programs for kinetic modeling of gene expression in neurons The book also discusses a computerized analysis of opioid receptor heterogeneity by ligand binding in test animals using computerized programs instead of employing manual or graphical methods Computerized curve fitting allows the researcher to utilize a more precise mathematical model to describe the binding of one ligand to one class of sites Section III evaluates data modeling and simulations and describes the practicality of using computers to design model ion channels Another paper discusses a graphical interaction program called MEMPOT to simulate an electrophysiological investigation of the properties of the membrane potential in stimulated cells The book also presents a quantitative data gathered from computer simulation of the factors that affect neuronal density per measured sections The book is suitable for microbiologists biochemists neuroscientists and researchers in the field of medical research as well as for advanced computer programmers in medical research work

Advances in Metabolic Mapping

Techniques for Brain Imaging of Behavioral and Learning Functions Francisco Gonzalez-Lima, Th.

Finkenstädt, Henning Scheich, 2012-12-06 In recent years revolutionary technical advances have permitted neuroscientists to map the functioning of the brain in exquisite detail Of interest are the new techniques that visually display cell energy metabolism which is coupled to functional brain activity in behaving animals This is the first book dealing with the application of 2 deoxyglucose and related metabolic mapping techniques for brain imaging of behavioral and learning functions Quantitative autoradiographic techniques based on the use of exogenous markers include radiolabeled glucose and its analogs especially 2 deoxyglucose and fluorodeoxyglucose Other mapping techniques are based on the histochemical staining of endogenous metabolic markers such as cytochrome oxidase as well as immunohistochemistry for expression of c fos genes In spite of the great potential capabilities of the new imaging techniques relatively few neuroscientists are using this approach to study brain functions related to behavior There is a need to review state of the art applications of these methods in behavioral neuroscience and to formulate recommendations for future research in this area This book is intended to fulfill these needs by bringing together leading neuroscientists using metabolic mapping approaches to elucidate brain mechanisms of behavior Discussions are not limited to one animal species but they cover a broad range of vertebrates with Quantitative Neuroendocrinology, 1995-10-16 In this volume contemporary methods unique behavioral capabilities designed to provide insights into mathematical structure for and predictive inferences about neuroendocrine control mechanisms are presented Collates an array of contemporary techniques for analysis of neuroendocrine data Discusses current problems in and solutions to neurohormone pulse analysis Identifies relevant software available

Neuroanatomical Tract-Tracing Laszlo Zaborszky, Floris G. Wouterlood, José Luis Lanciego, 2006-11-22 The first two editions of this title had a tremendous impact in neuroscience Between the Second edition in 1989 and today there has been an explosion of information in the field including advances in molecular techniques such as genomics and proteomics which have become increasing important in neuroscience A renaissance in fluorescence has occurred driven by the development of new probes new microscopes live imagers and computer processing The introduction of new markers has enormously stimulated the field moving it from tissue culture to neurophysiology to functional MRI techniques Microenvironment in Axonal Regeneration Christine C. Stichel-Gunkel, 2012-12-06 Since the pioneering studies of Ramon y Cajal the inability of lesioned adult CNS axons to regenerate has been well established During the past years advancements in molecular cellular and biochemical knowledge have provided new insights into the extrinsic mechanims underlying regeneration failure The rapid progress in this field has already led to the development of new concepts for therapeutic manipulations This book provides a comprehensive overview of structural and molecular changes induced by an invasive CNS lesion and their involvements in regeneration processes Moreover it demonstrates the strong growth promoting actitivies of implanted glial cells The data is discussed in relation to current knowledge on the mechanisms of axonal degeneration and regeneration and in terms of their relevance for the development of novel therapeutic strategies in Neuroanatomy Michael G. Stewart, 1992-06-16 A comprehensive and up to date reference that deals with methods of evaluation of structure and function of the nervous system both in vitro and in vivo Part I considers in vitro and ex vivo applications beginning with the fundamentals of the autoradiographic technique followed by autoradiography and image analysis Part II discusses several of the latest methods used in evaluating cerebral structure and function in vivo and recent advances in PET magnetic resonance imaging and biomagnetism Part III examines applications for quantification of the components of neurons and synapses and considers two and three dimensional methods of neuronal reconstruction Also *Imaging in Biological Research, Part B*, 2004-07-10 This volume addresses features the latest advances in stereology current methods in biological imaging including extensive sections on MRI CAT NMR PET and other imaging techniques

Neurobiology of Cytokines, Part B Errol B. DeSouza, 2013-10-22 Recent data suggest a critical role for cytokines in the regulation of brain and endocrine function under normal physiological conditions.
