

A medieval castle with multiple towers and a blue roof sits atop a rocky cliff. The scene is set at night, with a dark, starry sky. A bright comet with a long, glowing tail streaks across the sky from the left towards the castle. The castle is illuminated from within, casting a warm glow. The overall atmosphere is mysterious and fantastical.

Quantum Angels And Other Spacetime Anomalies:

Quantum Angels and Other Spacetime Anomalies Pierre Chevalier, 2000-12 The poetic selections in this volume reflect the author's thoughts on a variety of angels including beings so called real as well as so called imaginary the author has personally encountered during his lifetime others ponder the author's experiences real and imaginary concerning the concept of angels Some of the angel verses in this selection are based on astrological planetary attributions and consequently reflect Greek Roman Qabalistic and Christian mythologies Others are purely speculative and issue from the author's imagination Most of the verses in this poetic selection consider the author's imaginative views of various philosophies psychologies cosmologies and quantum physics Eleven of the eighty four verses in this selection also appear in the author's previous work TAROT Poetic Revelations and Other Verses

The Space Time Rupture Michael Pickering, In a startling twist of fate a series of nuclear explosions at three separate test sites each coincidentally positioned above a hidden tunnel beneath the Earth's crust triggers a catastrophic event These explosions unexpectedly intersecting create a tear in the fabric of space time giving birth to two volatile portals one leading back to the past and the other hurtling into the future As the world teeters on the precipice of catastrophe Doctor John Williams a brilliant physicist and his spirited nephew Jack find themselves thrust into the heart of this extraordinary event With humanity's survival hanging by a thread they embark on a perilous mission to unravel the mystery of these unstable portals and prevent them from igniting an uncontrollable chain reaction that threatens to engulf the planet in unprecedented heat rendering it uninhabitable Time races against them as Dr Williams and Jack delve into the depths of scientific research and historical records desperately seeking answers to their predicament Their journey takes them on a thrilling odyssey through the labyrinthine corridors of time where they encounter the echoes of the past and the possibilities of the future Will they succeed in their quest before the unstable portals unleash their devastating potential or will humanity succumb to the scorching inferno they have unleashed

Effective Lagrangians for the Standard Model Antonio Dobado, Angel Gomez-Nicola, Antonio L. Maroto, Jose R. Pelaez, 2012-12-06 This book is devoted to some recently developed techniques in quantum field theory QFT as well as to their main applications to different areas of particle physics All together they are known as the effective or phenomenological Lagrangian formalism Motivated by the enormous amount of work carried out in this field during the last years our purpose when writing this book has been to give a modern and pedagogical exposition of the most relevant aspects of the topic We hope that our efforts will be useful both for graduated students in the search for a solid theoretical background in modern phenomenology and for more experimented particle physicists willing to learn about this field or to start working on it Even though we have tried to keep the book as self contained as possible it has been written assuming that the reader is familiar at least with the most basic concepts and techniques of QFT gauge theories the standard model SM and differential geometry at the level of graduate studies It is therefore possible that senior high energy physicists may find the book too detailed and so they could probably

omit several sections The book is divided into two main parts and the appendices In the first part we introduce the fundamentals of the effective Lagrangian formalism and other basic topics such as Ward identities non linear sigma models NLSM spontaneous symmetry breaking SSB anomalies the SM symmetries etc
