Antiprotons and the Quark—Gluon Structure of Hadrons R. Klapisch,R. Landua,J.M. Richard,2012-12-06 The fourth course of the International School on Physics with Low Energy Antiprotons was held in Erice Sicily at the Ettore Majorana Centre for Scientific Culture from 25 to 31 January 1990 The previous courses covered topics related to fundamental symmetries light and heavy quark spectroscopy and antiproton nucleus interactions The purpose of this school is to review theoretical and experimental aspects of low energy antiproton physics concerning the quark gluon structure of hadrons and the dynamics of the antiproton nucleon interaction Another important objective is the discussion of future directions of research with low and medium energy antiprotons in the context of future medium energy facilities at CERN and elsewhere These proceedings contain both the tutorial lectures and the various contributions presented during the school by the participants The proceedings have been organised in three sections The first section is devoted to the theoretical lectures and contributions The selection of the various subjects wants to emphasize the correlation between antiproton nucleon physics and the underlying description in terms of quarks and gluons The second section contains an overview about 35 years of experiments with antiprotons It gives an introduction to the particle physics aspects of the field by outlining the historical development of experiment and theory and by describing the motivation and the results of three recent LEAR experiments in more detail The third section contains most of the contributions of the participants describing in more detail certain aspects of current or planned experiments at LEAR **Perspectives In Hadronic Physics - Proceedings Of The Conference** Sigfrido Boffi,Mauro Giannini,Claudio Ciofi Degli Atti,1997-12-16 **Hadrons And Nuclei From Qcd - Proceedings Of The International School-seminar '93** Keisuke Fujii,Yoshinori Akaishi,B L Reznik,1994-05-06 This

Physics National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Committee on Nuclear Physics, 1999-03-31 Dramatic progress has been made in all branches of physics since the National Research Council's 1986 decadal survey of the field. The Physics in a New Era series explores these advances and looks ahead to future goals. The series includes assessments of the major subfields and reports on several smaller subfields and preparation has begun on an overview volume on the unity of physics its relationships to other fields and its contributions to national needs. Nuclear Physics is the latest volume of the series. The book describes current activity in understanding nuclear structure and symmetries the behavior of matter at extreme densities the role of nuclear physics in astrophysics and cosmology and the instrumentation and facilities used by the field. It makes recommendations on the resources needed for experimental and theoretical advances in the coming decade.

Hadrons, Quarks and Gluons J. Thanh Van Tran, 1987 Introduction To Particle Physics Dong-sheng Du, Mao-zhi Yang, 2022-08-23 This book focuses on the basics of particle physics while covering as many frontier advances as possible. The book introduces readers to the principle of symmetry properties and classification of particles the quark model of hadrons and the interactions of particles. Following which the book offers a step by step presentation on the unified theory of electromagnetic and weak interaction as well as the gauge theory of strong interaction quantum chromodynamics QCD. In sequential order of the book's development readers will study topics on the deep inelastic scattering and parton model the mixing of electrically neutral particle and anti particles of neutral K meson neutral B meson and neutral D meson the CP non conservation the charmonium the exotic states the glue ball and hybrid state the lattice gauge theory the neutrino oscillation and CP violation of lepton system. Several new models beyond the standard model such as the grand unified theory and supersymmetric model are then discussed. As one of the salient takeaways of this book readers will also explore the interface between cosmology and particle physics. This book is suitable for senior undergraduates graduate students teachers and researchers in the field of particle physics. It is also valuable for experimental and theoretical particle physicists as a foundation for further research.

Unfolding the Matter of Nuclei Società italiana di fisica, 1998 The nucleus and its constituents are a challenging problem. The lectures collected in this book present a broad and comprehensive review of the current knowledge about nuclei. They cover topics such as searching for signatures of the quarks in nuclei with electromagnetic probes and at much higher energies for signatures of the quark gluon plasma in ultrarelativistic nuclear collisions. The attempts to obtain new nuclei in the laboratory are also discussed as well as the central role played by nuclear physics in the development of weak interactions. Progress in all these areas rests on a deeper theoretical handling of the nuclear and nucleon's structure. The latter can also be addressed by relying on numerical solutions of QCD on a discrete space time lattice. The advancement of computational capabilities has spurred a growing interest in this approach. Finally the book deals with different paths toward solving non perturbative QCD.

Energy Research Abstracts ,1994 **Particle Production Spanning MeV and TeV Energies** W. Kittel,P.J. Mulders,O. Scholten,2012-12-06 Particle production is an important topic in nuclear and particle physics At high energies particle production is considered to proceed via parton branching and subsequent fragmentation into hadrons The study of the dynamics of this process and the study of the structure of hadrons in the context of quantum chromodynamics QCD belong to the challenges of the standard

model of elementary particle physics requiring new nonperturbative approaches in field theory Within a nucleus many body dynamics is important and particle production may be used to determine many features of a non equilibrium quantum system at low or high temperatures At this Advanced Study Institute the different aspects of particle production were expanded upon in a series of lectures given by experts in their fields covering topics ranging from near threshold meson production in proton proton collisions to correlations in multi GeV jet fragmentation in high energy scattering processes and signals of a quark gluon plasma formed in ultra relativistic heavy ion collisions Strong emphasis was placed not only on state of the art research but also on the necessary physics background The lectures were supplemented by problem sets and discussion sessions There was also time for students to present short contributions on their research *An Assessment of U.S.-Based Electron-Ion Collider Science* National Academies of Sciences, Engineering, and Medicine,Division on Engineering and Physical Sciences,Board on Physics and Astronomy,Committee on U.S.-Based Electron-Ion Collider Science

Assessment,2018-10-13 Understanding of protons and neutrons or nucleons the building blocks of atomic nuclei has advanced dramatically both theoretically and experimentally in the past half century A central goal of modern nuclear physics is to understand the structure of the proton and neutron directly from the dynamics of their quarks and gluons governed by the theory of their interactions quantum chromodynamics QCD and how nuclear interactions between protons and neutrons emerge from these dynamics With deeper understanding of the quark gluon structure of matter scientists are poised to reach a deeper picture of these building blocks and atomic nuclei themselves as collective many body systems with new emergent behavior The development of a U S domestic electron ion collider EIC facility has the potential to answer questions that are central to completing an understanding of atoms and integral to the agenda of nuclear physics today This study assesses the merits and significance of the science that could be addressed by an EIC and its importance to nuclear physics in particular and to the physical sciences in general It evaluates the significance of the science that would be enabled by the construction of an EIC its benefits to U S leadership in nuclear physics and the benefits to other fields of science of a U S based EIC
