**Discovery of Single Top Quark Production** Dag Gillberg, 2011-01-22. The top quark is by far the heaviest known fundamental particle, with a mass nearing that of a gold atom. Because of this strikingly high mass, the top quark has several unique properties and might play an important role in electroweak symmetry breaking, the mechanism that gives all elementary particles mass. Creating top quarks requires access to very high energy collisions, and at present only the Tevatron collider at Fermilab is capable of reaching these energies. Until now, top quarks have only been observed produced in pairs via the strong interaction. At hadron colliders, it should also be possible to produce single top quarks via the electroweak interaction. Studies of single top quark production provide opportunities to measure the top quark spin, how top quarks mix with other quarks, and to look for new physics beyond the standard model. Because of these interesting properties, scientists have been looking for single top quarks for more than 15 years. This thesis presents the first discovery of single top quark production. It documents one of the flagship measurements of the D0 experiment, a collaboration of more than 600 physicists from around the world. It describes the first observation of a physical process known as single top quark production, which had been sought for more than 10 years before its eventual discovery in 2009. Further, this thesis describes in detail the innovative approach Dr. Gillberg took to this analysis. Through the use of Boosted Decision Trees, a machine learning technique, he observed the tiny single top signal within an otherwise overwhelming background. This Doctoral Thesis has been accepted by Simon Fraser University, Burnaby, BC, Canada.

**Quark Model and High Energy Collisions** Vladimir

Vladislavovich Anisovich, 2004 This is an updated version of the book published in 1985 QCD motivated it gives a detailed description of hadron structure and soft interactions in the additive quark model where hadrons are regarded as composite systems of dressed quarks In the past decade it has become clear that nonperturbative QCD responsible for soft hadronic processes may differ rather drastically from perturbative QCD The understanding of nonperturbative QCD requires a detailed investigation of the experiments and the theoretical approaches Bearing this in mind the book has been rewritten paying special attention to the interplay of soft hadronic collisions and the quark model It is at the crossroads of these domains that peculiar features of strong QCD reveal themselves The book discusses constituent quarks diquarks the massive effective gluons and the problem of scalar isoscalar mesons The quark gluonium classification of meson states is also given Experimentally observed properties of hadrons are presented together with the corresponding theoretical interpretation in the framework of the composite hadron structure The text includes a large theoretical part which shows how to treat composite systems including relativistic ones with a technique based on spectral integration This technique provides the possibility of handling hadrons as weakly bound systems of quarks and at the same time takes into account confinement Attention is focused on the composite structure revealing itself in high energy hadron collisions Fields of applicability of the additive quark model are discussed as is colour screening in hadronic collisions at high and superhigh energies Along with a detailed presentation of hadron-hadron collisions a description of hadron-nucleus collisions is given Sample Chapter s Chapter 1 Introduction 1 047 KB Contents High Energy Hadron Interactions Composite Systems High Energy Interactions of Composite Systems Hadron Zoology and Static Features of Hadrons Binary Processes in the Quark Model Multiparticle Production in the Quark Model Hadron Collisions at Moderately High Energies Hadron-Nucleus Collisions Readership Graduate students and researchers in particle and nuclear physics

technique based on spectral integration This technique provides the possibility of handling hadrons as weakly bound systems of quarks and at the same time takes into account confinement Attention is focused on the composite structure revealing itself in high energy hadron collisions Fields of applicability of the additive quark model are discussed as is colour screening in hadronic collisions at high and superhigh energies Along with a detailed presentation of hadron hadron collisions a description of hadron nucleus collisions is given
