

A few words about European research infrastructures (including e-Infrastructures) in the H2020 (... short reminder).

Research infrastructures are high level facilities, resources and services (provided through a legal institute / e.g. "ERIC") that are used by the research communities to conduct research and foster innovation in their fields (where relevant, they may be used beyond research, e.g. for education or public services).

NOTE:European Research Infrastructure Consortium (ERIC) is a specific legal form to facilitate the establishment and operation of research infrastructures with European interest.

Research infrastructures are also key in helping Europe to lead a global movement towards open, interconnected, data-driven and computer-intensive science and engineering.

e-Infrastructures will make every European researcher digital, increasing creativity and efficiency of research and bridging the divide between developed and less developed regions.

Integrating Activities of ERI (with respect to the European Charter for Access to Research Infrastructures) shall combine, in a closely co-ordinated manner:

- (i) **Networking activities**, to foster a culture of co-operation between research infrastructures, scientific communities, industries and other stakeholders as appropriate, and to help develop a more efficient and attractive European Research Area;
- (ii) **Trans-national access or virtual access activities**, to support scientific communities in their access to the identified key research infrastructures;
- (iii) **Joint research activities**, to improve, in quality and/or quantity, the integrated R&D services provided at European level by the infrastructures.

All three categories of activities are mandatory as synergistic effects are expected from these different components.
