Role Of Solar Ultraviolet Radiation In Marine Ecosystems:

The Role of Solar Ultraviolet Radiation in Marine Ecosystems John Calkins, 2013-03-09 The inspiration for this monograph derived from the realization that human technical capacity has become so great that we can even without malice substantially modify and damage the gigantic and remote outer limit of our planet the stratosphere Above the atmosphere of our ordinary experience the stratosphere is a tenuous layer of gas blocked from rapid exchange with the troposphere some twenty kilometers above the surface of the earth seldom reached by humans and yet a fragile shell which shields life on earth from a band of solar radiation of demonstrable injurious potential It is immediately obvious that if stratospheric ozone were reduced and consequently the intensity of solar ultraviolet radiation reaching the earth's surface were increased then human skin cancer known to be related to solar ultraviolet exposure would also be increased But how does one even begin to estimate the impact of changed solar ultraviolet radiation on such a diverse interacting and complex ecosystem as the oceans Studies which I conducted in Iceland focused on this question and were noted to the Marine Sciences Panel of the Scientific Affairs Committee of NATO by Professor Unnsteinn Stefansson leading to a request to investigate the possibility of organizing a NATO sponsored Advanced Research Institute on this topic

The Role of Solar Ultraviolet Radiation in Marine Ecosystems John Calkins, 2014-01-15 **The Effects of UV Radiation in the Marine Environment** Stephen De Mora, Serge Demers, Maria Vernet, 2000-03-09 This book first published in 2000 provides a comprehensive review of UV radiation effects in the marine environment A multidisciplinary approach is adopted to discuss all aspects from a physical chemical and biological perspective The book begins by describing the attenuation of UV radiation in the atmosphere and sea water outlining the photochemical reactions involved and highlighting the role that such chemistry can play in influencing the biogeochemical cycling of various elements The deleterious consequences of such radiation on organisms and strategies adopted to mitigate these harmful repercussions are discussed The organisms considered range from virus and bacteria through phytoplankton and zooplankton to fish and mammals The book is aimed at researchers and graduate students in photobiology photochemistry and environmental science It will also be useful as a supplementary text for courses in oceanography climatology and ecology

The Role of Solar Ultraviolet Radiation in Marine Ecosystems John Calkins, 1982 **UV Effects in Aquatic Organisms and Ecosystems** E Walter Helbling, Horacio Zagarese, 2007-10-31 This book offers extensive coverage of the most important aspects of UVR effects on all aquatic not just freshwater and marine ecosystems encompassing UV physics chemistry biology and ecology Comprehensive and up to date **UV Effects in Aquatic Organisms and Ecosystems** aims to bridge the gap between environmental studies of UVR effects and the broader traditional fields of ecology oceanography and limnology Adopting a synthetic approach the different sections cover the physical factors controlling UVR intensity in the atmosphere the penetration and distribution of solar radiation in natural waters the main photochemical process affecting natural and anthropogenic substances and direct and indirect effects on organisms from

viruses bacteria and algae to invertebrate and vertebrate consumers Researchers and professionals in environmental chemistry photochemistry photobiology and cell and molecular biology will value this book as will those looking at ozone depletion and global change **Expected Effects of Climatic Change on Marine Coastal Ecosystems** J.J.
