HART, 2019-06-14 **Man the Hunted: Primates, Predators, and Human Evolution** Donald Hart, 2005 *Primate Anti-Predator Strategies* Sharon Gursky-Doyen, K.A.I. Nekaris, 2007-05-31 Since the 1960s primatologists have recognized the impact of predation on the evolution of morphology the social systems and cognitive behavior of monkeys and apes but few studies considered its impact on the prosimians lemurs lorises galagos and tarsiers This comprehensive volume written by experts in the field narrows this gap by highlighting the effect of predation on the order Primates in general Theoretical approaches to understanding how primates perceive predation threat as well as proximate and ultimate causes to address threat and attack are considered across the primate order Although this volume concentrates on the least known group in this theoretical area the prosimians contributions by researchers on numerous primate taxa across four major geographical regions make this a novel and exciting contribution to students interested in primate evolution and ecology *The Oxford Handbook of International Human Rights Law* Dinah Shelton, 2013-09 The Oxford Handbook of International Human Rights Law provides an authoritative and original overview of one of the key branches of international law Forty contributors comprehensively analyse the role of human rights in international law from a global perspective examining its origins and principles and measuring its impact on the world **The Creative Spark** Agustín Fuentes, 2017-03-21 A bold new synthesis of paleontology archaeology genetics and anthropology that overturns misconceptions about race war and peace and human nature itself answering an age old question What made humans so exceptional among all the species on Earth Creativity It is the secret of what makes humans special hiding in plain sight Agustín Fuentes argues that your child's finger painting comes essentially from the same place as creativity in hunting and gathering millions of years ago and throughout history in making war and peace in intimate relationships in shaping the planet in our communities and in all of art religion and even science It requires imagination and collaboration Every poet has her muse every engineer an architect every politician a constituency The manner of the collaborations varies widely but successful collaboration is inseparable from imagination and it brought us everything from knives and hot meals to iPhones and interstellar spacecraft Weaving fascinating stories of our ancient ancestors creativity Fuentes finds the patterns that match modern behavior in humans and animals This key quality has propelled the evolutionary development of our bodies minds and cultures both for good and for bad It's not the drive to reproduce nor competition for mates or resources or power nor our propensity for caring for one another that have separated us out from all other creatures As Fuentes concludes to make something lasting and useful today you need to understand the nature of your collaboration with others what imagination can and can't accomplish and finally just how completely our creativity is responsible for the world we live in Agustín Fuentes's resounding multimillion year perspective will inspire

**Theological Ethics through a Multispecies Lens** Celia E. Deane-Drummond, 2019-11-05 There are two driving questions informing this book The first is where does our moral life come from It presupposes that considering morality broadly is inadequate Instead different aspects need to be teased apart It is not sufficient to assume that different virtues are bolted onto a vicious animality red in tooth and claw Nature and culture have interlaced histories By weaving in evolutionary theories and debates on the evolution of compassion justice and wisdom

it shows a richer account of who we are as moral agents. The second driving question concerns our relationships with animals. Deane Drummond argues for a complex community-based multispecies approach. Hence, rather than extending rights, a more radical approach is a holistic multispecies framework for moral action. This need not weaken individual responsibility. She intends not to develop a manual of practice but rather to build towards an alternative philosophically informed approach to theological ethics, including animal ethics. The theological thread weaving through this account is wisdom. Wisdom has many different levels and in the broadest sense is connected with the flow of life understood in its interconnectedness and sociality. It is profoundly theological and practical. In naming the project the evolution of wisdom, Deane Drummond makes a statement about where wisdom may have come from and its future orientation. But justice, compassion, and conscience are not far behind, especially in so far as they are relevant to both individual decision making and institutions.
