Management Integrated Model Mimics:

Cyberspace Mimic Defense Jiangxing Wu, 2019-12-02 This book discusses uncertain threats which are caused by unknown attacks based on unknown vulnerabilities or backdoors in the information system or control devices and software hardware Generalized robustness control architecture and the mimic defense mechanisms are presented in this book which could change the easy to attack and difficult to defend game in cyberspace The endogenous uncertain effects from the targets of the software hardware based on this architecture can produce magic mimic defense fog and suppress in a normalized mode random disturbances caused by physical or logic elements as well as effects of non probability disturbances brought by uncertain security threats Although progress has been made in the current security defense theories in cyberspace and various types of security technologies have come into being the effectiveness of such theories and technologies often depends on the scale of the prior knowledge of the attackers on the part of the defender and on the acquired real timing and accuracy regarding the attackers behavior features and other information Hence there lacks an efficient active defense means to deal with uncertain security threats from the unknown Even if the bottom line defense technologies such as encrypted verification are adopted the security of hardware software products cannot be quantitatively designed verified or measured Due to the loose coupling relationship and border defense modes between the defender and the protected target there exist insurmountable theoretical and technological challenges in the protection of the defender and the target against the utilization of internal vulnerabilities or backdoors as well as in dealing with attack scenarios based on backdoor activated collaboration from both inside and outside no matter how augmented or accumulated protective measures are adopted Therefore it is urgent to jump out of the stereotyped thinking based on conventional defense theories and technologies find new theories and methods to effectively reduce the utilization of vulnerabilities and backdoors of the targets without relying on the priori knowledge and feature information and to develop new technological means to offset uncertain threats based on unknown vulnerabilities and backdoors from an innovative perspective This book provides a solution both in theory and engineering implementation to the difficult problem of how to avoid the uncontrollability of product security caused by globalized marketing COTS and non trustworthy software hardware sources It has been proved that this revolutionary enabling technology has endowed software hardware products in IT ICT CPS with endogenous security functions and has overturned the attack theories and methods based on hardware software design defects or resident malicious codes This book is designed for educators theoretical and technological researchers in cyber security and autonomous control and for business technicians who are engaged in the research on developing a new generation of software hardware products by using endogenous security enabling technologies and for other product users Postgraduates in IT ICT CPS ICS will discover that as long as the law of structure determines the nature and architecture determines the security is properly used the problem of software hardware design defects or malicious code embedding will become the

swelling of Achilles in the process of informationization and will no longer haunt Pandora's box in cyberspace Security and opening up advanced progressiveness and controllability seem to be contradictory but there can be theoretically and technologically unified solutions to the problem

Pensions at Work Jack Quarter, Isla Carmichael, Sherida Ryan, 2008-05-24 Pension funds have come to play an increasingly important role within the new economy According to Statistics Canada in 2006 trustee pension funds in Canada had 836 billion of assets and represented the savings of 4 6 million Canadian workers Pensions at Work is a unique collection of papers that uses a labour perspective to deal with the socially responsible investment of pension funds Featuring leading Canadian and international scholars it builds on existing scholarship on socially responsible investment and on the growing interest of the Canadian labour movement in joint trusteeship What is unique about this collection is that it synthesizes three distinct themes socially responsible investment pension funds and labour studies The contributors address an array of critical issues such as gaps in the education of union trustees of pension funds the impact of

human capital criteria on shareholder returns the influence of corporate engagement upon corporate performance and the nature of public private partnerships PPPs Although the essays in Pensions at Work all address the nexus between socially responsible investment pension funds and unions each looks at a particular manifestation of that relationship through a different disciplinary lens This collection moves the discussion to pension funds in which union representatives are also trustees a relatively new approach that will be of great interest to institutional investors the labour movement and instructors in labour studies programs
