ABSTRACT

Today's children and adolescents experience various pressures, leading to an increase in mental health problems not only in Malaysia but throughout the world. Methods of managing stress and emotions are divided into positive and negative methods. Note that applying positive methods is important so that this group remains safe and healthy. This qualitative study utilizes a grounded theory approach to explore the emotional management strategies used by children and adolescents from a mental health therapist's perspective. Eighteen mental health therapists were interviewed using semi-structured interviews for 20 cases of children and adolescents who experience mental health issues. Therapists use the body outline-emotion tool, namely "Creative Expressive-Bodily Maps of Emotions" (CE-BME), in psychotherapy sessions. Consequently, the grounded theory analysis establishes a framework for using CE-BME to identify and reshape emotional management strategies for children and adolescents who experience mental health issues. These findings have implications for therapists using CE-BME tools for emotional management as positive coping skills. CE-BME can be a quick, fast, and effective

Management Of Emotional Problems Of Children And Adolescents:

Management of Emotional Problems of Children and Adolescents Arthur H. Chapman, 1968 **Management of Emotional Problems of Children and Adolescents** Arthur Harry Chapman, 1974 *Unified Protocols for Transdiagnostic Treatment of Emotional Disorders in Children and Adolescents* Jill Ehrenreich-May, Sarah M. Kennedy, Jamie A. Sherman, Emily L. Bilek, Brian A. Buzzella, Shannon M. Bennett, David H. Barlow, 2017-12-11 Cognitive behavior therapy CBT is arguably the most effective psychotherapy model for children and adolescents with emotional disorders e.g. anxiety, depression, obsessive compulsive disorders, trauma and stress related disorders etc. Emotional disorders in youth frequently overlap or co-occur and yet many of the existing effective therapies available for children and adolescents with emotional disorders target just one or a smaller subset of these problems. The Unified Protocols for Transdiagnostic Treatment of Emotional Disorders in Children and Adolescents, based in groundbreaking research from Jill Ehrenreich-May, David H. Barlow, and colleagues, suggest that there may be a simpler and more efficient method of utilizing effective strategies such as those commonly included in CBT in a manner that addresses the broad array of emotional disorder symptoms in children and adolescents. The child and adolescent Unified Protocols do this by framing effective strategies in the general language of strong or intense emotions more broadly and by targeting change through a common lens that applies across emotional disorders. Specifically, the child and adolescent Unified Protocols help youth by allowing them to focus on a straightforward goal across emotional disorders: reducing intense negative emotion states by extinguishing the distress and anxiety these emotions produce through emotion-focused education, awareness techniques, cognitive strategies, problem-solving, and an array of behavioral strategies including a full range of exposure and activation techniques. The Unified Protocol for children and adolescents comprises a Therapist Guide as well as two Workbooks, one for children and one for adolescents. *Unified Protocols for Transdiagnostic Treatment of Emotional Disorders in Children and Adolescents* Jill Ehrenreich-May, Sarah M.
