The Ganges Water Diversion:

Environmental Effects and Implications M. Monirul Qader Mirza, 2006-02-03 This book deals with environmental effects on both sides of the border between Bangladesh and India caused by the Ganges water diversion This issue came to my attention in early 1976 when news media in Bangladesh and overseas began publications of articles on the unilateral withdrawal of a huge quantity of water from the Ganges River through the commissioning of the Farakka Barrage in India I first pursued the subject professionally in 1984 while working as a contributor for Bangladesh Today Holiday and New Nation During the next two decades I followed the protracted hydro political negotiations between the riparian countries in the Ganges basin and I traveled extensively to observe the environmental and ecological changes in Bangladesh as well as India that occurred due to the water diversion The Ganges one of the longest rivers of the world originates at the Gangotri glacier in the Himalayas and flows across the plains of North India Eventually the river splits into two main branches and empties into the Bay of Bengal The conflict of diversion and sharing of the Ganges water arose in the middle of the last century when the government of India decided to implement a barrage at Farakka to resolve a navigation problem at the Kolkata Port

The Law of Non-navigational Uses of International Watercourses Nahid Islam, 2010-01-01 Presentation de l'auteur Despite Asia's large share of global water resources and the importance of its water for sustaining one of the largest agrarian populations in the world Asia's trans boundary water resource management regimes are poorly developed There are only two working international regimes in South and South east Asia the Mekong and the Indus regimes The remaining international watercourses in Asia are used by riparian countries in a self interested manner without much consideration for the interests of other states or for the environment These national interests do not often represent the interests and needs of the local people This book is divided into three Parts Part I discusses the different contexts of law making in the industrialized west and in agrarian societies in Asia as well as the changing context of law making following the emergence of the concept of sustainable development Part II discusses the regime of international watercourses Part III of the book presents two case studies in Asia the Mekong and the Ganges The main argument is that in the absence of public participation in decision making and resource management the basin states revert to using the watercourses according to the principles of the classical regime The result so far has been unsustainable development environmental degradation and growing poverty of local user communities

Governing International Watercourses Susanne Schmeier, 2013 In this contribution to the academic and policy debates surrounding the management and governance of shared natural resources the focus is placed on River Basin Organizations as the key institutions for managing internationally shared water resources The book includes advice to policy makers based on worldwide analysis and three detailed case studies from three continents the Senegal West Africa Mekong South east Asia and Danube Europe rivers

Water Scarcity and Conflict in African River

Basins Mahlakeng Khosi Mahlakeng, 2023-03-31 The book presents a critical and comparative analysis of the hydropolitical landscape of African transboundary river basins which for much of the past century have been affected by water scarcity. River and lake basins can become a source of tension and conflict due to a complicated mix of environmental, demographic, diplomatic, historical and geopolitical factors. This book however specifically focuses on the important and often under looked role played by scarcity in generating or exacerbating conflicts in shared river basins. Asserting that transboundary river basins tie states into a web of interdependence, this book raises awareness of how water scarcity or the depletion of water resources complicates this relationship as nations are forced to look beyond their own borders to meet the demand for water to satisfy multiple needs. Taking a comparative approach, it examines three shared basins: the Orange, Senqu, the Nile and the Niger River basins. While situated in different regions, all three basins are marked by serious environmental challenges that are detrimental to combustible hydropolitics over such shared water resources and they provide fascinating insights into the links between climate variability and change, water resources, human security, conflict, adaptation and regime capacity. Overall, this book argues that conflict over transboundary resources can be prevented given the establishment of norms, rules and the role of external actors that help regulate state behaviour and control their impacts. This book will be of great interest to students and scholars of water resource management, hydropolitics, environmental conflict, resource scarcity and international relations. It will also be of interest to policymakers involved in transboundary water resource governance.

Environmental Challenges and Governance Sacchidananda Mukherjee, Debashis Chakraborty, 2015-03-02 The economies located in East South and Southeast Asia have witnessed an interesting growth-sustainability trade-off over the last decades. While growth considerations have paved ways for deepened ties with growing trade, investment waves and increasing population pressure necessitated exploitation of hitherto unutilized natural resources, focus on environmental sustainability has been a recent consideration. The growth impetus still playing a key role in these economies, it becomes imperative that the countries effectively address the key sustainability concerns, e.g. air and water pollution, land degradation, loss of biodiversity, climate change issues like CO₂ emissions etc. But how prepared is the governance mechanism of these countries covering not only the legislative and administrative framework but also involvement of the judiciary, presence of spirited civil society and active engagement of stakeholders in policy framing, dialogues to rise up to these challenges? The book seeks an answer to this question through the environmental governance mechanism and natural resource conservation policies in three vibrant regions within Asia. A holistic development dimension of sustainable development path emerges through discussion of policies adopted by developed Japan, South Korea, upper middle China, Malaysia, developing India, Indonesia, Philippines, Sri Lanka, Thailand and least developed countries Bangladesh, Myanmar, Nepal. **River Basins and International Relations** Christian Ploberger, 2023-06-08 This book argues that river basins represent a particular structural setting in international relations with the potential for generating a dynamic of cooperation among the involved countries. The

volume applies the concept of regional cooperation to international river basins to highlight their relevance as a particular space in international relations emphasizing both the inter connectivity and transnationalism of international river basins It addresses the challenges related to resource distribution between up and down stream countries showcasing a variety of examples of cooperation and conflictual relations within various international river basins Case studies are drawn from across the globe and include the Mekong the Indus the Euphrates Tigris and the Danube international river basins Each chapter outlines the different aspects which support or undermine cooperation in each case taking into consideration key areas surrounding resource sharing national development environmental considerations and national security This book will be of great interest to students and scholars with an interest in international river basins regional cooperation water resource competition international relations and environmental politics

River Basin Organizations in Water

Diplomacy Anoulak Kittikhoun, Susanne Schmeier, 2020-11-19 Will tensions and disputes among states sharing international water courses and lakes turn into active conflicts Addressing this question the book shows that these concerns are more prominent due to the locations and underlying political dynamics of some of these large rivers and the strategic interests of major powers Written by a combination of leading practitioners and academics this book shows that states are more prone to cooperate and manage their transboundary issues over the use of their common water resources through peaceful means and the key institutions they employ are international river basin organizations RBOs Far from being mere technical institutions RBOs are key mechanisms of water diplomacy with capacity and effectiveness varying on four key interrelated factors their legal and institutional development and the influence of their technical and strategic resources The basins analyzed span all continents from both developed and developing basins including the Columbia Great Lakes Colorado Senegal Niger Nile Congo Jordan Helmand Aral Sea Mekong Danube and Rhine Contributing to the academic discourse on transboundary water management and water conflict and cooperation the book provides insights to policy makers on which water diplomacy engagements can be successful the strengths to build on and the pitfalls to avoid so that shared water resources are managed in a cooperative sustainable and stable way

Crossing Borders Michelle Ann Miller, Michael Douglass, Matthias Garschagen, 2017-12-06 This multidisciplinary book examines the diverse ways in which environmental disasters with compounding impacts are being governed as they traverse sovereign territories across rapidly urbanising societies in Asia and the Pacific Combining theoretical advances with

contextually rich studies the book examines efforts to tackle the complexities of cross border environmental governance In an urban age in which disasters are not easily contained within neatly delineated jurisdictions both in terms of their interconnected causalities and their cascading effects governance structures and mechanisms are faced with major challenges related to cooperation collaboration and information sharing This book helps bridge the gap between theory and practice by offering fresh insights and contrasting explanations for variations in transboundary disaster governance regimes among urbanising populations in the Asia Pacific Integrated River Basin Governance Bruce Hooper,2005-08-31

Integrated River Basin Governance Learning from International Experience is designed to help practitioners implement integrated approaches to river basin management IRBM It aims to help the coming generation of senior university students learn how to design IRBM and it provides current researchers and the broader water community with a resource on river basin management Drawing on both past and present river basin and valley scale catchment management examples from around the world the book develops an integration framework for river basin management Grounded in the theory and literature of natural resources management and planning the thrust of the book is to assist policy and planning rather than extend knowledge of hydrology biophysical modelling or aquatic ecology Providing a classification of river basin organizations and their use the book also covers fundamental issues related to implementation decision making institutions and organizations information management participation and awareness legal and economic issues integration and coordination processes building human capacity Integrated River Basin Governance focuses on the social economic organizational and institutional arrangements of river basin management Methods are outlined for implementing strategic and regional approaches to river basin management noting the importance of context and other key elements which have been shown to impede success The book includes a range of tools for river basin governance methods derived from real life experiences in both developed and developing countries The successes and failures of river basin management are discussed and lessons learned from both are presented The ebook for this title is available to download for free on the WaterWiki

Theorizing Transboundary Waters in International Relations Kinga Szálkai,Máté Szalai,2024-01-01 This book is the first collection of state of the art research projects analyzing water conflict and cooperation with an explicitly theoretical point of view Its fourteen chapters offer a comprehensive and up to date overview on how the application of various theoretical perspectives can support the work of scholars and practitioners in mitigating water conflict and developing cooperation The volume starts out from a literature review on the theorization of transboundary waters in International Relations which prepares the ground for the demonstration of the latest approaches of scholars currently working on this field The discussion of their findings is divided into four main sections The first section deals with reflections and critiques on the grand theories of International Relations proposing new and more nuanced frameworks for understanding and managing transboundary water relations by going beyond the traditional assumptions The second section focuses on the catalysts and

barriers of cooperation applying theoretical frameworks which reveal the consequences of the dynamics in power relations and institutional frameworks The third section investigates into the perspectives at the intersections of theory and practice related to the most practical field within the scope of the volume water diplomacy The fourth section introduces new perspectives to provide specific entry points for understanding and managing water conflict and cooperation Overall the work intends to demonstrate that the theorization of transboundary waters can significantly contribute to the deeper understanding and the more efficient management of water conflicts and cooperation from several aspects The authors come from diverse backgrounds and their individual careers are often related to the intersections of theory and practice in the field of transboundary water management Their expertise covers water issues from all around the globe which is reflected in the range of the analyzed case studies The diversity of the experts involved their backgrounds their perspectives the applied theories and the analyzed cases was an important priority for the editors

The World Bank Policy for Projects on International Waterways Salman M. A. Salman, 2009 This book deals with the evolution and context of the Bank policy for projects on international waterways It starts with a brief description of how the Bank faced the challenges stemming from such projects and the different approaches deliberated by the Bank that led to the issuance of the first policy in 1956 The Book then reviews the implementation experience and analyzes the principles and procedures as well as the main features of each of the policies issued in 1956 1965 and 1985 The principles of international water law prevailing at each stage of the policy updates are examined and

Challenges to International Waters United Nations Environment Programme, Global International Waters Assessment, 2006 The GIWA Final Report provides a comprehensive review of the most important findings from the GIWA regional reports It summarises the major transboundary concerns and their environmental and socio economic impacts To better understand these concerns and develop solutions to address them the Report identifies the root causes and draws policy relevant conclusions It also outlines knowledge gaps which impede the sustainable management of international waters

Environmental Concerns and Sustainable Development Vertika Shukla, Narendra Kumar, 2019-07-03 The prevailing global environmental crisis is primarily because of non standardized parameters for environmental regulation Unplanned expansion of economic activities consideration for environmental conservation and several associated problems are emerging due to degradation in quality of ambient environment such as clean air safe drinking water and quality of food particularly in developing nations Due to poor casual execution of EIA protocol newly developing countries are preferred destination for establishing pollution emitting industries which results in degradation and depletion of natural resources Lack of environmental policy intervention is another major attraction for establishing such industries in these nations In order to ensure sustainable development the highest priority issues include the monitoring and eradication of environmental problems which arise due to economic development Initiation of any form of economic development primarily results in loss of forests and thus biodiversity followed by deterioration in quality of air and contamination of natural resources The worst

impact of non standardized economic development is the contamination of air water and soil Sustainable development ensures responsible interface with the environment to minimize the depletion or degradation of natural resources and ensure long term environmental quality It involves integrated approaches in understanding the importance of environmental management systems and policy inventions leading to improved environmental performance The present book is proposed to address the environmental concerns associated with economic development and approaches involved to attain sustainable economic development which include monitoring of the quality of air deforestation quality of water resources soil erosion and degradation of the natural environment International River Management Frank Marty,1997 **River Basin Planning**
