fortunate that the majority were able to take part. As such, though not exhaustive, the book does represent an anthology of contemporary neurosurgeons. From the preface: At the very beginning of the project, our intention was to make a poetbook. But month after month, it became obvious that the work would be much more expansive. Ultimately, we produced three volumes. Nevertheless, we hope that all the three volumes together will remain easily accessible and a daily companion. The pocket has to be more like a travel bag. We would like to thank all of the contributors; they have sacrificed their valuable time to deliver sound and critical views and, above all, useful guidelines. *Acute Pain Management* Raymond S.

Sinatra, 2009-04-27. This textbook provides an overview of pain management useful to specialists as well as non-specialists, surgeons, and nursing staff. Comprehensive Management of the Upper-Limb Amputee Diane J. Atkins, Robert H. III

Meier, 2012-12-06. Each year in the United States, an estimated 40,000 persons lose a limb. Of these amputees, approximately 30% lose a hand or an arm. This loss is most frequently related to trauma occurring in the healthy young adult male and is often work-related. Approximately 3% of all amputees are born with congenital limb absence. In children, the ratio of congenital to acquired amputation is 2:1, and the ratio of upper limb to lower limb amputees is 1:2:1. Therefore, since relatively few amputations result in upper limb loss, only a small number of health practitioners, even those specializing in amputee rehabilitation, have the opportunity to provide services for a significant number of arm amputees. As a result, clinicians need to share their experiences so that the full range of options for optimum care and rehabilitation of the patient population may be considered. To meet this challenge for wider communication of clinical experience, a group of upper limb amputee specialists met in Houston, Texas, in 1981 to serve as the core faculty for a course entitled Contemporary Issues in Upper Extremity Amputation and Prosthetic Function. This program provided the opportunity for surgeons, physiatrists, engineers, prosthetists, social workers, psychologists, occupational therapists, and physical therapists from the United States and Canada to discuss their extensive experience in working with upper extremity amputees. A second conference continuing the discussion of upper limb amputee rehabilitation was held one year later. *Skeletal Trauma E-Book* Bruce D.
