Management of Tritium at Nuclear Facilities International Atomic Energy Agency, 1984 **International Control of Tritium for Nuclear Nonproliferation and Disarmament** Martin B. Kalinowski, 2004-03-29 Tritium is used by all nuclear weapons states to increase the explosive yield of atomic bombs and to miniaturize them However this radioactive material has not yet been put under appropriate international control comparable to the nuclear safeguards applied for plutonium and uranium It is a neglected material in efforts to control the spread and Technical Reports Series ,2004 Experience in the Management of Radioactive Waste After Nuclear Accidents: A Basis for Preplanning IAEA, 2022-11-22 Major accidents at a nuclear power plant or fuel cycle facility are rare but can produce large quantities of radioactive waste with widely varying characteristics that can be difficult to manage Large volumes of radioactive waste can also be generated by accidents at military installations or by the mishandling high activity sealed radiation sources In the case of a major accident radioactive waste volumes may quickly overwhelm existing national management and disposal infrastructure Appropriate disposal facilities might not be available to match the amounts or characteristics of the wastes This publication is developed to support Member States efforts towards improved preparedness related to the management of radioactive waste in the event of a nuclear or radiological accident It builds on experiences gained following historic accidents to develop lessons learned which planners in governmental agencies and nuclear facilities are encouraged to consider in preplanning activities
