Management Of Design Engineering And Management Perspectives:

Management of Design Sriram Dasu, Charles Eastman, 2012-12-06 Product design significantly influences product cost and quality as well as market share and profitability of a firm Design projects often involve many people belonging to different functional areas and in many organizations several design projects may be under way at the same time Due to this complexity management of design has given rise to a rich set of research problems in management and engineering In this volume design is considered as the planning and specification activity prior to fabrication Design determines what products will be produced how they will be produced and when they will be introduced into the market The quality of the products and the speed with which they are developed are significantly affected by the design process The design process by which a product is developed is determined by the managerial and engineering practices tools and techniques This book presents engineering and management perspectives on design Topics covered include Decomposition of product development projects Tools and techniques for preliminary evaluation of designs Interface between design and manufacturing assembly and distribution Design information flows and Determination of the scope timing and duration of projects and the allocation of resources

Software Maintenance - A Management Perspective Phaneendra Nath Vellanky, 2007-10-23 Computer systems play an important role in our society Software drives those systems Massive investments of time and resources are made in developing and implementing these systems Maintenance is inevitable It is hard and costly Considerable resources are required to keep the systems active and dependable We cannot maintain software unless maintainability characters are built into the products and processes There is an urgent need to reinforce software development practices based on quality and reliability principles Though maintenance is a mini development lifecycle it has its own problems Maintenance issues need corresponding tools and techniques to address them Software professionals are key players in maintenance While development is an art and science maintenance is a craft We need to develop maintenance personnel to master this craft Technology impact is very high in systems world today We can no longer conduct business in the way we did before That calls for reengineering systems and software Even reengineered software needs maintenance soon after its implementation We have to take business knowledge procedures and data into the newly reengineered world Software maintenance people can play an important role in this migration process Software technology is moving into global and distributed networking environments Client server systems and object orientation are on their way Massively parallel processing systems and networking resources are changing database services into corporate data warehouses Software engineering environments rapid application development tools are changing the way we used to develop and maintain software Software maintenance is moving from code maintenance to design maintenance even onto specification maintenance Modifications today are made at specification level regenerating the software components testing and integrating them with the system Eventually software maintenance has to manage the evolution and evolutionary characteristics of software systems Software professionals have

to maintain not only the software but the momentum of change in systems and software In this study we observe various issues tools and techniques and the emerging trends in software technology with particular reference to maintenance We are not searching for specific solutions We are identifying issues and finding ways to manage them live with them and control their negative impact
