Managing Breast Cancer Risk Monica Morrow, Virgil Craig Jordan, 2003. Managing Breast Cancer Risk is a single source for information needed by primary care physicians, nurses, gynecologists, as well as oncologic specialists who deal with women who are concerned about breast cancer. Its purpose is to bring together a multidisciplinary group of experts to address breast cancer risk in a clinically meaningful way. Chapters providing detailed information on individual risk factors are accompanied by a discussion of models which integrate multiple factors for a more complete assessment of risk. Traditional strategies for risk management including surveillance and prophylactic surgery are reviewed and the data on newer techniques such as ductal lavage and screening with magnetic resonance is presented. The rationale for chemoprevention with selective estrogen receptor modulators (SERMS) is discussed and the evidence for tamoxifen as a chemopreventative is updated. The potential for chemoprevention with newer SERMS and the aromatase inhibitors is reviewed. Finally, the critical and often ignored areas of quality of life and symptom management are addressed.

Ovarian Cancer National Collaborating Centre for Cancer (Great Britain), National Institute for Health and Clinical Excellence (Great Britain), 2011. These clinical guidelines review a number of clinical questions that involve the detection, diagnosis, and initial management of ovarian cancer and which focus on areas of uncertainty or where there is a wide variation in clinical practice. The clinical questions were chosen using a consultative process that involved an array of stakeholders that included patient groups, representatives from relevant professional organisations, and the pharmaceutical industry. For each chapter of the guideline, the Guideline Development Group (GDG) have made evidence-based recommendations concerning clinical practice and where applicable, some recommendations on future research. The GDG are pleased that the focus of many of the clinical issues relate to an early stage in the patient pathway with particular relevance to patients and their families. In particular, identifying the first tests in primary care should help ensure women are directed onto the right clinical pathway in a timely fashion. This guidance updates and replaces recommendation 1.7.4 in Referral guidelines for suspected cancer (NICE clinical guideline 27) published June 2005.
