*Management of Prostate Cancer* Michel Bolla, Hendrik van Poppel, 2012-04-24 This book provides an exhaustive review of the current state of the art in the management of prostate cancer from screening to treatment. A particular feature is the emphasis placed on the value of a multidisciplinary approach. The opening chapters address basic aspects including epidemiology, biology, and chemoprevention. The role of individual and mass screening is carefully appraised, and diagnosis, clinical work up, and the role of active surveillance are discussed in detail. Subsequent chapters are devoted to each of the therapies that may be employed, including open and robotic laparoscopic radical prostatectomy, the various forms of radiation therapy, high intensity focused ultrasound, cryotherapy, hormonal therapy, and targeted therapies and vaccination. Up to date data from clinical trials are included. The editors are members of the EORTC who have coordinated phase III EORTC trials and have worldwide reputations.

**Prostate Cancer: New Horizons in Research and Treatment** Michael L. Cher, Kenneth V. Honn, Avraham Raz, 2006-04-11 In recent years the pace of research in prostate cancer has increased dramatically. Creative ideas in combination with new and emerging technologies have led to an explosion of discovery. These types of advances in prostate cancer research presage an era of new treatment strategies based on an understanding of the cellular and molecular mechanisms of disease. In creating this book we aimed to cover a broad bench to bedside research spectrum ranging from genetic, molecular, and cellular analyses to epidemiological studies, refinements in local treatment strategies, and new biologically based, non-hormonal treatments for systemic disease. Researchers and clinicians will find in this book a group of timely and clinically relevant chapters on prostate cancer research and treatment.
