Calvin Tchatchoua,2022-06-02 It was my pleasure to work with Calvin on his Doctoral Study at Walden University from 2014 to 2018 According to the Institute of Medicine of the National Academy of Science 2012 the United States is the only industrialized nation in the world that does not have a universal healthcare system Citizens in this country spend twice the amount of money on healthcare costs while the quality of services is only ranked 31st in the world by the World Health Organization By using system s theory Calvin identified those factors that are directly and inversely related to healthcare costs If these factors go up healthcare costs go up if they go down healthcare costs go down In Calvin s study he documents and discusses that 667 billion dollars is wasted because we don t manage these factors efficiently He then identifies factors that are inversely related to healthcare costs If they go up healthcare costs go down if they go down healthcare costs go up This represents a total of 391 billion To correct this problem we need to improve efficiencies to reduce costs and we need to reduce inefficiencies to lower costs with evidence based practices that work see Figure 3 on page 98 If only half of these issues were successfully worked on hospital costs could be reduced by 500 billion We would have enough funding to make certain that every person in the United States could have fully funded healthcare insurance Gossett et al 2019 This is a book that is well worth reading Kenneth D Gossett Ph D May 6 2022 [Orthostatic Proteinuria: Understanding Causes, Management Strategies, and Long-term Health Implications](#)
