Managing Capital Flows In East Asia:

Managing Capital Flows in East Asia, 1996-01-01 Analyzes the deficiencies of the budget system and recommends ways of improving fiscal management so that it meets the requirements of a decentralized market based economy The structural transformation of the Russian economy since 1992 has been accompanied by major changes in the countrys fiscal picture ranging from massive reductions in government spending through the introduction of noninflationary treasury bill financing to fiscal decentralization This report analyzes the deficiencies of the budget system and recommends ways of improving fiscal management so that it meets the requirements of a decentralized market based economy The study focuses on two crucial and interrelated features of fiscal management that determine the outcome of fiscal policy and the allocative efficiency of government resources intergovernmental fiscal relations and the structural technical and institutional aspects of the budget system

Managing Capital Flows in East Asia World Bank,1996 Looks in greater detail at the relations between the macro and the microeconomic impact of external capital flows and the range of policy responses available for managing these flows

Coping with Capital Flows in East Asia C. H. Kwan,Donna Vandenbrink,Siow Yue Chia,1998 This timely book examines how the countries of East Asia coped with the vast pool of international capital that flowed into the region during the early 1990s East Asia appeared to be doing well But as this book was in preparation in 1997 a currency crisis sent capital fleeing and catapulted the East Asian economies into turmoil Country specific updates describe events since July 1997 how government authorities addressed the crisis and what lessons can be learned

Managing Capital Flows and Exchange Rates Reuven Glick,1998-06-13 The essays in this volume examine the theoretical and policy issues associated with international capital flows and exchange rates for emerging markets in the Pacific Basin region Emerging market countries in both Asia and Latin America offer a wide variety of examples for the comparative study of the implications of international capital flow surges and appropriate policy responses The essays address four broad issues First they investigate the determinants of international capital flows particularly the relative role of domestic and external factors in driving capital flows Second they inquire how predictable and contagious capital flow reversals and exchange rate crises are Third they explore what the domestic economic effects of capital inflows on emerging economies have been and finally seek to suggest what are the appropriate responses by policymakers to capital inflow surges

Managing Capital Flows provides analyses that can help policymakers develop a framework for managing capital flows that is consistent with prudent macroeconomic and financial sector stability While capital inflows can provide emerging market economies with invaluable benefits in pursuing economic development and growth they can also pose serious policy challenges for macroeconomic management and financial sector supervision The expert contributors cover a wide range of

issues related to managing capital flows and analyze the experience of emerging Asian economies in dealing with surges in capital inflows. They also discuss possible policy measures to manage capital flows while remaining consistent with the goals of macroeconomic and financial sector stability. Building on this analysis, the book presents options for workable national policies and regional policy cooperation, particularly in exchange rate management. Containing chapters that bring in international experiences relevant to Asia and other emerging market economies, this insightful book will appeal to policymakers in governments and financial institutions as well as public and private finance experts. It will also be of great interest to advanced students and academic researchers in finance.

Capital Flows and the Emerging Economies Sebastian Edwards, 2008-04-15. The 1990s witnessed several acute currency crises among developing nations that invariably spread to other nearby at-risk countries. These episodes in Mexico, Thailand, South Korea, Russia, and Brazil were all exacerbated by speculative foreign investments and high volume movements of capital in and out of those countries. Insufficient domestic controls and a sluggish international response further undermined these economies as well as the credibility of external oversight agencies like the International Monetary Fund. This timely volume examines the correlation between volatile capital mobility, currency instability, and the threat of regional contagion, focusing particular attention on the emergent economies of Latin America, Southeast Asia, and Eastern Europe. Together, these studies offer a new understanding of the empirical relationship between capital flows, international trade, and economic performance, and also afford key insights into realms of major policy concern.

Managing Capital Flows Dominic Wilson, 2001. *Recent Experiences in Managing Capital Inflows—Cross-Cutting Themes and Possible Policy Framework*. International Monetary Fund. Strategy, Policy, & Review Department, 2011-02-14. Emerging markets (EMs) are experiencing a surge in capital inflows, lifting asset prices and growth prospects. While inflows are typically beneficial for receiving countries, inflow surges can carry macroeconomic and financial stability risks. This paper reviews the recent experience of EMs in dealing with capital inflows.

and suggests a possible framework for IMF policy advice on the spectrum of measures available to policymakers to manage inflows including macroeconomic policies prudential measures and capital controls Illustrative applications of this framework suggest that it may be appropriate for several countries based on their current circumstances to consider prudential measures or capital controls in response to capital inflows The suggested framework is intended to inform staff policy advice to all Fund members with open capital accounts It forms part of a broader effort to sharpen Fund surveillance preserve evenhandedness and foster greater global policy coordination As indicated in the Supplement to this paper this broader effort includes the development of global rules of the game on macroprudential policies capital account liberalization and reserve adequacy and the preparation of spillover reports assessing spillovers from the five systemic economies all of which will inform the current and broader framework being developed *International Capital Flows* Martin Feldstein, 2007-12-01

Recent changes in technology along with the opening up of many regions previously closed to investment have led to explosive growth in the international movement of capital Flows from foreign direct investment and debt and equity financing can bring countries substantial gains by augmenting local savings and by improving technology and incentives Investing companies acquire market access lower cost inputs and opportunities for profitable introductions of production methods in the countries where they invest But as was underscored recently by the economic and financial crises in several Asian countries capital flows can also bring risks Although there is no simple explanation of the currency crisis in Asia it is clear that fixed exchange rates and chronic deficits increased the likelihood of a breakdown Similarly during the 1970s the United States and other industrial countries loaned OPEC surpluses to borrowers in Latin America But when the U S Federal Reserve raised interest rates to control soaring inflation the result was a widespread debt moratorium in Latin America as many countries throughout the region struggled to pay the high interest on their foreign loans *International Capital Flows* contains recent work by eminent scholars and practitioners on the experience of capital flows to Latin America Asia and eastern Europe These papers discuss the role of banks equity markets and foreign direct investment in international capital flows and the risks that investors and others face with these transactions By focusing on capital flows productivity and determinants and the policy issues they raise this collection is a valuable resource for economists policymakers and financial market participants

Ruling Capital Kevin P. Gallagher, 2015-02-10 In *Ruling Capital* Kevin P Gallagher demonstrates how several emerging market and developing countries EMDs managed to reregulate cross border financial flows in the wake of the global financial crisis despite the political and economic difficulty of doing so at the national level Gallagher also shows that some EMDs particularly the BRICS coalition were able to maintain or expand their sovereignty to regulate cross border finance under global economic governance institutions Gallagher combines econometric analysis with in depth interviews with officials and interest groups in select emerging markets and policymakers at the International Monetary Fund the World Trade Organization and the G 20 to explain key characteristics of the global economy Gallagher develops a

theory of countervailing monetary power that shows how emerging markets can counter domestic and international opposition to the regulation of cross border finance Although many countries were able to exert countervailing monetary power in the wake of the crisis such power was not sufficient to stem the magnitude of unstable financial flows that continue to plague the world economy Drawing on this theory Gallagher outlines the significant opportunities and obstacles to regulating cross border finance in the twenty first century *Investment Funds in Emerging Markets* Teresa Barger,Irving Kuczynski,1996-01-01 World Bank Discussion Paper No 326 Draws on the successful experiences of five East Asian economies Japan the Republic of Korea Singapore Taiwan China and Hong Kong to show how they have exploited the opportunities made possible by the information technology revolution and built sustainable competitive advantages in many high value added industries and services The study examines the role of government in unleashing private sector response promoting the information technology industry diffusing technology and focusing resources on strategic elements of the national information infrastructure It also explores the role of the private sector in influencing the development and use of the new technologies **Rebalancing for Sustainable Growth** Masahiro Kawai,Jong-Wha Lee,2015-04-30 The Asian model of export led growth served it well in the post war period but prolonged sluggish growth of the developed economies following the global financial crisis together with growing inequality and rising environmental problems point to the need for a new growth model The purpose of this book is to describe the challenges facing Asian economies in the post global financial crisis environment and to identify structural issues and policies that can help guide Asian policymakers to expand the growth potential of domestic and regional demand in coming years and thereby create a basis for balanced sustainable and inclusive long term growth These issues and policies span a variety of dimensions including macroeconomic policy monetary fiscal and foreign currency management real sector issues trade and industrial structure infrastructure development labor market and social policy financial sector reform and regulation and regional cooperation and architecture Key recommendations to achieve these goals include measures to deepen social protection to support social resilience increase infrastructure investment to create a seamless Asia enhance productivity in the services sector establish a region wide free trade agreement to encourage intraregional trade in goods and services and investment through economies of scale and dynamic efficiency of a larger market promote a shift to a low carbon society and support green growth and deepen and integrate financial markets to facilitate the recycling of Asia s high savings for investment within the region *Balanced Trade* Jesse Richman,Howard Richman,Raymond Richman,2014-04-24 How should a principled nation which believes in the benefits of mutually beneficial trade respond to the predations of mercantilist trading partners and imbalanced trade Many argue that the response should be to do little or nothing *Balanced Trade* argues that achieving the full benefits of international trade requires an effective response Although trade deficits provide short term gains in consumption these are combined with long term losses in consumption innovation investment employment and power Furthermore market

mechanisms do not correct trade imbalances that result from mercantilism nor do they compensate for the long term shift in production and consumption towards the mercantilist Balancing trade can make important short run and long run contributions to economic stability and prosperity In America today despite the growing evidence that imbalanced free trade is not working many American economists remain adamant in their promotion of free trade They are also quick to label actions taken to balance trade as protectionism The political system has also failed to effectively address the problem of imbalanced trade and the Federal Reserve has often exacerbated rather than addressed the challenge We show that the classical economic arguments against mercantilism do not justify doing nothing Effectively responding to imbalanced trade and mercantilism requires careful selection of strategy in order to achieve multiple objectives balancing trade while maintaining the benefits of international trade avoiding unnecessary inefficiencies and maintaining compliance with international law One of the best options is the Scaled Tariff By targeting countries with which the United States has a large current account deficit the Scaled Tariff would efficiently legally and effectively balance trade It would be applied to all imported goods from trade surplus countries that have had a sizable trade surplus with the United States over the most recent four economic quarters The tariff rate would be designed to take in a portion e g 50% of the bilateral trade deficit goods plus services as revenue No particular product is protected the scaled tariff simply changes the terms of trade between the two countries much as currency devaluation would change the terms of trade with all countries **External**
